

2023 navy advancement quotas

2023 navy advancement quotas represent a critical benchmark for sailors seeking career progression within the United States Navy. These quotas, meticulously calculated and released annually, dictate the number of personnel eligible for promotion to higher pay grades across various ratings. Understanding these figures is paramount for active-duty sailors aiming to navigate the complex advancement system, plan their professional development, and set realistic career goals. This comprehensive article delves into the intricacies of the 2023 Navy advancement quotas, exploring their significance, how they are determined, key trends observed, and the impact they have on sailors' careers. We will also discuss the factors influencing these quotas and offer insights into preparing effectively for advancement in the current climate.

Understanding Navy Advancement Quotas

The United States Navy utilizes a competitive advancement system to ensure that only the most qualified and deserving sailors are promoted. At the heart of this system are advancement quotas, which essentially act as a cap on the number of promotions possible within each enlisted pay grade and occupational specialty, or "rating." These quotas are not arbitrary; they are the result of careful consideration of various factors, including the Navy's overall manning needs, budget constraints, projected attrition rates, and the desired skill mix within different career fields. For sailors, knowing these quotas is like having a roadmap to their career aspirations. They provide a quantifiable target and highlight the level of competition they can expect to face.

The Purpose and Significance of Advancement Quotas

The primary purpose of advancement quotas is to manage the enlisted force structure effectively. By controlling the number of promotions, the Navy can ensure it has the right number of personnel at each pay grade to meet operational requirements and maintain a balanced distribution of experience and leadership across all commands. For individual sailors, the significance of these quotas cannot be overstated. They directly influence the likelihood of promotion, the timeframe in which a sailor can expect to advance, and the overall trajectory of their naval career. High quotas in a particular rating can mean faster promotions and greater opportunities, while low quotas can necessitate patience, additional training, and a focus on excelling above peers.

How Navy Advancement Quotas Are Determined

The determination of Navy advancement quotas is a multi-faceted process involving several key stakeholders and data points. The Bureau of Naval Personnel (BUPERS) is primarily responsible for this process. They analyze current manning levels, project future personnel requirements based on fleet modernization, new ship construction, and evolving strategic demands. Factors such as enlisted community managers' assessments of skill gaps, projected retirements and separations, and the need to maintain a certain promotion tempo are all taken into account. Additionally, the Navy considers the overall budget allocated for personnel costs, which can indirectly influence the number of promotions the service can support.

Key Features of 2023 Navy Advancement Quotas

The release of the 2023 Navy advancement quotas marked a pivotal moment for countless sailors across the fleet. These figures provided tangible targets for those striving for upward mobility and offered insights into the Navy's strategic priorities regarding enlisted personnel. Analyzing the trends within these quotas can reveal which ratings are in high demand, which may be facing saturation, and where the Navy is investing its training and development resources. Understanding these nuances is crucial for sailors to make informed decisions about their career paths and to focus their efforts on areas that offer the greatest potential for advancement.

Trends in 2023 Advancement Quotas by Rating

Observing the 2023 Navy advancement quotas by rating reveals distinct patterns and shifts in personnel needs. Certain technical ratings, particularly those in high-demand areas like cyber warfare, advanced electronics, and nuclear propulsion, often see consistently higher advancement opportunities due to the specialized skills required and the Navy's ongoing investment in these fields. Conversely, ratings that are experiencing a surplus of personnel or have seen their operational relevance diminish may have tighter quotas, leading to increased competition. It is essential for sailors to research the specific quotas for their rating to gauge their individual prospects. These figures are typically published in official Navy directives and can be accessed through official Navy portals.

Impact of Manning Levels on Quota Allocation

The allocation of 2023 Navy advancement quotas is intrinsically linked to current and projected manning levels within each rating. Ratings that are critically undermanned will naturally see higher quotas to

incentivize recruitment and retention and to allow for faster promotion of existing personnel. Conversely, ratings that are overmanned may experience significantly lower quotas, even if individual performance is high. This ensures that the Navy maintains the desired force structure and prevents an imbalance of senior enlisted personnel in certain areas, which could lead to stagnation and a lack of leadership opportunities for junior sailors.

Changes from Previous Years' Quotas

Naval leadership continually adjusts advancement quotas to align with the evolving needs of the fleet. Therefore, comparing the 2023 Navy advancement quotas with those from previous years can offer valuable insights into long-term trends and shifts in naval strategy. A noticeable increase in quotas for certain technical fields might indicate a strategic focus on modernizing the fleet or enhancing cyber capabilities. Conversely, a decrease in quotas for other ratings could signal a reorganization of personnel or a reduced emphasis on those specific skill sets. Sailors who have been in the Navy for several years can use this historical data to better predict future advancement opportunities and to make strategic career decisions.

Preparing for Advancement in 2023

Securing a promotion within the United States Navy is a competitive endeavor that requires more than just meeting minimum eligibility requirements. The 2023 Navy advancement quotas underscore the importance of a proactive and strategic approach to career development. Sailors aiming for advancement must not only demonstrate proficiency in their current roles but also actively pursue opportunities for professional growth, skill enhancement, and leadership development. Understanding the factors that contribute to selection, and actively working to excel in those areas, significantly increases one's chances of success in this competitive environment.

The Role of Professional Military Education (PME)

Professional Military Education (PME) plays a crucial role in a sailor's advancement journey, and its importance is amplified when facing competitive 2023 Navy advancement quotas. Courses like the Navy Leadership and Ethics Center programs, as well as specialized rating-specific training, demonstrate a sailor's commitment to professional growth and their understanding of naval leadership principles. Completing PME not only enhances a sailor's knowledge base but also serves as a tangible indicator of their dedication to exceeding expectations and preparing for greater responsibility. Many advancement exams and selection boards heavily weigh completed PME as a measure of a sailor's initiative and potential.

Importance of Performance Evaluations and Awards

Consistent high-quality performance, as documented in periodic evaluations (Evals), is foundational to advancement. Superior performance in daily duties, successful completion of challenging assignments, and a demonstrated willingness to go above and beyond are critical. Furthermore, earning recognized awards, such as Navy Achievement Medals or Commendation Medals, can significantly bolster a sailor's record. These accolades not only serve as objective validation of exceptional performance but also differentiate candidates when advancement quotas are tight. A strong evals record, coupled with well-deserved awards, presents a compelling case for promotion to selection boards.

Maximizing Exam Scores and Record Reviews

The advancement examination is a significant component of the promotion process, and achieving a high score is often the deciding factor when advancement quotas are limited. Sailors must dedicate ample time to studying official Navy enlisted advancement system materials, naval history, and rating-specific technical knowledge. Beyond the exam, the enlisted record review is equally vital. This review encompasses a sailor's entire career, including training, qualifications, PME, awards, and performance history. Ensuring that all aspects of the record are accurate, complete, and reflect a sailor's achievements is paramount to maximizing their chances of selection under the 2023 Navy advancement quotas.

Factors Influencing Future Advancement Quotas

The landscape of military personnel management is dynamic, and several overarching factors will continue to shape future Navy advancement quotas. Understanding these influences can provide sailors with a forward-looking perspective on their career development and the evolving priorities of the U.S. Navy. As the service adapts to new global challenges and technological advancements, the demand for specific skill sets will fluctuate, directly impacting promotion opportunities.

Technological Advancements and Skill Demand

The increasing integration of advanced technologies across all naval operations is a significant driver of future skill demand. Ratings involved in cyber security, artificial intelligence, data analytics, unmanned systems, and advanced communication technologies are likely to see continued high demand. Consequently, advancement quotas in these areas may remain robust as the Navy seeks to build and retain a highly skilled technical workforce. Sailors who proactively acquire skills and certifications in these emerging fields will position themselves favorably for future advancement.

Budgetary Constraints and Force Structure Changes

Like all branches of the U.S. military, the Navy operates within budgetary constraints that directly influence personnel management. Shifts in defense spending, global strategic priorities, and fleet modernization plans can lead to changes in force structure, which in turn affect manning requirements and advancement quotas. For instance, downsizing of certain platforms or a strategic shift towards different operational environments could result in reduced quotas in associated ratings, while expansion in other areas could lead to increased opportunities. Sailors should stay informed about broader naval strategic initiatives to anticipate potential changes.

Retention and Recruitment Initiatives

The Navy's success in retaining experienced sailors and recruiting new talent directly impacts the availability of personnel within each rating. If retention rates are high, there may be less need for rapid advancement to fill senior positions, potentially leading to tighter quotas. Conversely, if the Navy faces challenges with retention or recruitment in specific ratings, they may increase advancement opportunities to incentivize service members to remain and to attract new personnel. Advancement quotas are often used as a tool to manage the overall health and sustainability of critical enlisted communities.

Frequently Asked Questions

What were the most significant trends observed in the 2023 Navy advancement quotas?

The 2023 Navy advancement quotas saw a continued trend of increased quotas for critical enlisted ratings, particularly in cyber, IT, and STEM fields, reflecting the Navy's strategic focus on technological advancement. Conversely, quotas in some legacy or less in-demand ratings saw a slight decrease or remained relatively flat.

How did the 2023 advancement quotas compare to previous years, especially concerning specific ratings?

Compared to previous years, 2023 generally maintained or increased quotas for high-demand, skill-intensive ratings like those in the information warfare and intelligence communities. Ratings requiring specialized technical skills or those facing retention challenges often had higher advancement opportunities. Conversely, ratings with a surplus of personnel or lower operational tempo might have seen tighter quotas.

Were there any specific E-ratings or paygrades that experienced unusually high or low advancement opportunities in 2023?

Yes, for 2023, E-5 and E-6 paygrades in critical technical ratings, such as Cryptologic Technicians (CT) and Information Systems Technicians (IT), often saw higher advancement quotas than in previous years. Conversely, some general ratings at E-4 and E-7 levels might have experienced lower quotas due to an abundance of eligible candidates or reduced manpower needs in those specific areas.

What factors are believed to have influenced the 2023 Navy advancement quota decisions?

Key factors influencing 2023 quotas included projected manning needs for specific ratings based on fleet requirements and future operational demands, projected retention rates for enlisted personnel, the overall size of the eligible candidate pool for each paygrade and rating, and strategic investments in areas like cyber warfare, artificial intelligence, and advanced manufacturing.

How can Sailors best prepare to capitalize on the 2023 advancement quota trends?

Sailors can best prepare by focusing on professional development in high-demand ratings, acquiring relevant certifications (e.g., CompTIA, CISSP), pursuing higher education, excelling in their current roles, and actively seeking challenging assignments. Understanding the Navy's strategic priorities and aligning personal development with those priorities will be crucial.

What is the Navy's strategy for managing advancement quotas to ensure it has the right personnel in the right roles?

The Navy employs a dynamic strategy for managing advancement quotas that involves continuous analysis of fleet manning requirements, skill gaps, and projected attrition. They use data analytics to forecast future needs and adjust quotas accordingly, aiming to incentivize personnel towards critical ratings and ensure a balanced, skilled enlisted force capable of meeting evolving operational challenges.

2023 navy advancement quotas: Nonstrategic Nuclear Weapons Amy F. Woolf, 2008 During the Cold War, the United States and Soviet Union both deployed thousands of 'nonstrategic' nuclear weapons that were intended to be used in support of troops in the field during a conflict. These included nuclear mines; artillery; short, medium, and long-range ballistic missiles; cruise missiles; and gravity bombs. In contrast with the longer-range 'strategic' nuclear weapons, these weapons had a lower profile in policy debates and arms control negotiations. At the end of the 1980s, before the demise of the Soviet Union, each nation still had thousands of these weapons deployed with their troops in the field, aboard naval vessels, and on aircraft. In 1991, both the United States and Soviet Union announced that they would withdraw most and eliminate many of their nonstrategic nuclear weapons. The United States now retains approximately 1,100 nonstrategic nuclear weapons, with a few hundred deployed with aircraft in Europe and the remaining stored in the United States. Estimates vary, but experts believe Russia still has between 2,000 and 6,000 warheads for nonstrategic nuclear weapons in its arsenal. The Bush Administration indicated that nuclear weapons remained essential to U.S. national security interests, but it did quietly redeploy and remove some of the nuclear weapons deployed in Europe. In addition, Russia has increased its reliance on nuclear weapons in its national security concept. Some analysts argue that Russia has backed away from its commitments from 1991 and may develop and deploy new types of

nonstrategic nuclear weapons. Analysts have identified a number of issues with the continued deployment of U.S. and Russian nonstrategic nuclear weapons. These include questions about the safety and security of Russia's weapons and the possibility that some might be lost, stolen, or sold to another nation or group; questions about the role of these weapons in U.S. and Russian security policy, and the likelihood that either nation might use these weapons in a regional contingency with a non-nuclear nation; questions about the role that these weapons play in NATO policy and whether there is a continuing need for the United States to deploy these weapons at bases overseas; and questions about the relationship between nonstrategic nuclear weapons and U.S. nonproliferation policy, particularly whether a U.S. policy that views these weapons as a militarily useful tool might encourage other nations to acquire their own nuclear weapons, or at least complicate U.S. policy to discourage such acquisition. Some argue that these weapons do not create any problems and the United States should not alter its policy. Others, however, argue that the United States should reduce its reliance on these weapons and encourage Russia to do the same. Many have suggested that the United States and Russia expand efforts to cooperate on ensuring the safe and secure storage and elimination of these weapons, possibly by negotiating an arms control treaty that would limit these weapons and allow for increased transparency in monitoring their deployment and elimination. Others have suggested that any potential new U.S.-Russian arms control treaty count both strategic and nonstrategic nuclear weapons. This might encourage reductions or the elimination of these weapons. The 111th Congress may review some of these proposals.

2023 navy advancement quotas: Building Industries at Sea - 'Blue Growth' and the New Maritime Economy Kate Johnson, Ian Masters, Gordon Dalton, 2022-09-01 Throughout the world there is evidence of mounting interest in marine resources and new maritime industries to create jobs, economic growth and to help in the provision of energy and food security. Expanding populations, insecurity of traditional sources of supply and the effects of climate change add urgency to a perceived need to address and overcome the serious challenges of working in the maritime environment. Four promising areas of activity for 'Blue Growth' have been identified at European Union policy level including Aquaculture; Renewable Energy (offshore wind, wave and tide); Seabed Mining; and Blue Biotechnology. Work has started to raise the technological and investment readiness levels (TRLs and IRLs) of these prospective industries drawing on the experience of established maritime industries such as Offshore Oil and Gas; Shipping; Fisheries and Tourism. An accord has to be struck between policy makers and regulators on the one hand, anxious to direct research and business incentives in effective and efficient directions, and developers, investors and businesses on the other, anxious to reduce the risks of such potentially profitable but innovative investments. The EU H2020 MARIBE (Marine Investment for the Blue Economy) funded project was designed to identify the key technical and non-technical challenges facing maritime industries and to place them into the social and economic context of the coastal and ocean economy. MARIBE went on to examine with companies, real projects for the combination of marine industry sectors into multi-use platforms (MUPs). The purpose of this book is to publish the detailed analysis of each prospective and established maritime business sector. Sector experts working to a common template explain what these industries are, how they work, their prospects to create wealth and employment, and where they currently stand in terms of innovation, trends and their lifecycle. The book goes on

to describe progress with the changing regulatory and planning regimes in the European Sea Basins including the Caribbean where there are significant European interests. The book includes:• Experienced chapter authors from a truly multidisciplinary team of sector specialisms• First extensive study to compare and contrast traditional Blue Economy with Blue Growth• Complementary to EU and National policies for multi-use of maritime space

2023 navy advancement quotas: Unequal Treatment Institute of Medicine, Board on Health Sciences Policy, Committee on Understanding and Eliminating Racial and Ethnic Disparities in Health Care, 2009-02-06 Racial and ethnic disparities in health care are known to reflect access to care and other issues that arise from differing socioeconomic conditions. There is, however,

increasing evidence that even after such differences are accounted for, race and ethnicity remain significant predictors of the quality of health care received. In *Unequal Treatment*, a panel of experts documents this evidence and explores how persons of color experience the health care environment. The book examines how disparities in treatment may arise in health care systems and looks at aspects of the clinical encounter that may contribute to such disparities. Patients' and providers' attitudes, expectations, and behavior are analyzed. How to intervene? *Unequal Treatment* offers recommendations for improvements in medical care financing, allocation of care, availability of language translation, community-based care, and other arenas. The committee highlights the potential of cross-cultural education to improve provider-patient communication and offers a detailed look at how to integrate cross-cultural learning within the health professions. The book concludes with recommendations for data collection and research initiatives. *Unequal Treatment* will be vitally important to health care policymakers, administrators, providers, educators, and students as well as advocates for people of color.

2023 navy advancement quotas: The Noncommissioned Officer and Petty Officer Department of Defense, National Defense University Press, 2020-02-10 The Noncommissioned Officer and Petty Officer BACKBONE of the Armed Forces. Introduction The Backbone of the Armed Forces To be a member of the United States Armed Forces--to wear the uniform of the Nation and the stripes, chevrons, or anchors of the military Services--is to continue a legacy of service, honor, and patriotism that transcends generations. Answering the call to serve is to join the long line of selfless patriots who make up the Profession of Arms. This profession does not belong solely to the United States. It stretches across borders and time to encompass a culture of service, expertise, and, in most cases, patriotism. Today, the Nation's young men and women voluntarily take an oath to support and defend the Constitution of the United States and fall into formation with other proud and determined individuals who have answered the call to defend freedom. This splendid legacy, forged in crisis and enriched during times of peace, is deeply rooted in a time-tested warrior ethos. It is inspired by the notion of contributing to something larger, deeper, and more profound than one's own self. Notice: This is a printed Paperback version of the The Noncommissioned Officer and Petty Officer BACKBONE of the Armed Forces. Full version, All Chapters included. This publication is available (Electronic version) in the official website of the National Defense University (NDU). This document is properly formatted and printed as a perfect sized copy 6x9.

2023 navy advancement quotas: Global Trends 2030 National Intelligence Council (U.S.), 2012 This report is intended to stimulate thinking about the rapid and vast geopolitical changes characterizing the world today and possible global trajectories over the next 15 years. As with the NIC's previous Global Trends reports, we do not seek to predict the future, which would be an impossible feat, but instead provide a framework for thinking about possible futures and their implications. In-depth research, detailed modeling and a variety of analytical tools drawn from public, private and academic sources were employed in the production of Global Trends 2030. NIC leadership engaged with experts in nearly 20 countries, from think tanks, banks, government offices and business groups, to solicit reviews of the report.

2023 navy advancement quotas: A History of Army Aviation 1950-1962 Richard P. Weinert,

Susan Canedy, Army Training & Doctrine Command, 2011 U.S. Army aviation expanded dramatically in both size and breadth of activities after its inception in 1942, but much of its post-World War II history, particularly after the establishment of the Air Force as an independent service by the national Security Act of 1947, has been relatively neglected. Despite a certain amount of jockeying for position by both services, particularly in the early years after their separation, the Army was able to carve out a clear transport and operational combat role for its own air arm. A History of Army Aviation - 1950-1962 examines the development of the Army's air wing, especially for air support of ground troops, both in terms of organization and in relation to the ongoing friction with the Air Force. After describing the rapid expansion of purely Army air power after 1950 and the accompanying expansion of aviation training, the book delves into the reorganization of aviation activities within a Directorate of Army Aviation. It also provides a valuable account of the successful development of aircraft armament, perhaps the most significant advance of this period. In particular, intensive experimentation at the Army Aviation School led to several practical weapons systems and helped to prove that weapons could be fired from rotary aircraft. This arming of the helicopter was to have a profound effect on both Army organization and combat doctrine, culminating in official approval of the armed helicopter by the Department of the Army in 1960. A History of Army Aviation - 1950-1962 also explores the development of new aircraft between 1955 and 1962, including the UH-1 medical evacuation, transport, and gunship helicopter and the HC-1 cargo copter. In addition, the book discusses the Berlin Crisis of 1961 as an impetus for immediate and unexpected expansion of army aviation, quickly followed by the beginnings of intervention in Vietnam by the end of 1962.

2023 navy advancement quotas: A Historical Review and Analysis of Army Physical Readiness Training and Assessment Whitfield East, 2013-12 The Drillmaster of Valley Forge-Baron Von Steuben-correctly noted in his Blue Book how physical conditioning and health (which he found woefully missing when he joined Washington's camp) would always be directly linked to individual and unit discipline, courage in the fight, and victory on the battlefield. That remains true today. Even an amateur historian, choosing any study on the performance of units in combat, quickly discovers how the levels of conditioning and physical performance of Soldiers is directly proportional to success or failure in the field. In this monograph, Dr. Whitfield Chip East provides a pragmatic history of physical readiness training in our Army. He tells us we initially mirrored the professional Armies of Europe as they prepared their forces for war on the continent. Then he introduces us to some master trainers, and shows us how they initiated an American brand of physical conditioning when our forces were found lacking in the early wars of the last century. Finally, he shows us how we have and must incorporate science (even when there exists considerable debate!) to contribute to what we do-and how we do it-in shaping today's Army. Dr. East provides the history, the analysis, and the pragmatism, and all of it is geared to understanding how our Army has and must train Soldiers for the physical demands of combat. Our culture is becoming increasingly "unfit, due to poor nutrition, a lack of adequate and formal exercise, and too much technology. Still, the Soldiers who come to our Army from our society will be asked to fight in increasingly complex and demanding conflicts, and they must be prepared through new, unique, and scientifically based techniques. So while Dr. East's monograph is a fascinating history, it is also a required call for all leaders to better understand the science and the art of physical preparation for the battlefield. It was and is important for us to get this area of training right, because getting it right means a better chance for success in combat.

2023 navy advancement quotas: U.S. Navy at War Ernest J. King, United States, 2010-09-01 At the beginning of World War II, in the midst of building the United States Navy into a two-ocean fleet, the Japanese attack on Pearl Harbor put the effectiveness of American sea power in doubt. Three and a half years later, the U.S. Navy was undoubtedly the strongest in the world. In that time, the Japanese fleet had been shattered, the U-Boat threat was a thing of the past, and the Navy had supported the greatest amphibious campaigns in history. U.S. Navy at War: Official Reports by Fleet Admiral Ernest J. King, U.S.N., consisting of three reports submitted by Admiral King to the Secretary of the Navy in the course of the war, is an official account of the U.S. Navy's operations in World War II. It provides an authoritative contemporary account of the beginning of the fleet buildup prior to the outbreak of war; the campaigns in the Pacific, Atlantic, and Mediterranean; naval research and development; submarine warfare; and many other aspects of the naval war. In addition, the book provides useful listings of all U.S. ships added to the fleet between December 7, 1941 and October 1, 1945, a list of U.S. ships lost in combat, and another that outlines the status of major combatant ships of the Japanese Navy at the end of the war - a sobering testimony to the overwhelming naval superiority achieved by the United States. Long out of print, U.S. Navy at War remains a unique source for anyone interested in the Second World War at sea. Originally published in 1946. 310 pages, ill.

2023 navy advancement quotas: Closer Than You Think Samuel R. White Jr., 2017 The Defense Innovation Initiative (DII), begun in November 2014 by former Secretary of Defense Chuck Hagel, is intended to ensure U.S. military superiority throughout the 21st century. The DII seeks broad-based innovation across the spectrum of concepts, research and development, capabilities, leader development, wargaming, and business practices. An essential component of the DII is the Third Offset Strategy-a plan for overcoming (offsetting) adversary parity or advantage, reduced military force structure, and declining technological superiority in an era of great power competition. This study explored the implications for the Army of Third Offset innovations and breakthrough capabilities for the operating environment of 2035-2050. It focused less on debating the merits or feasibility of individual technologies and more on understanding the implications-the second and third order effects on the Army that must be anticipated ahead of the breakthrough.

2023 navy advancement quotas: American Military History Volume 1 Army Center of Military History, 2016-06-05 American Military History provides the United States Army-in particular, its young officers, NCOs, and cadets-with a comprehensive but brief account of its past. The Center of Military History first published this work in 1956 as a textbook for senior ROTC courses. Since then it has gone through a number of updates and revisions, but the primary intent has remained the same. Support for military history education has always been a principal mission of the Center, and this new edition of an invaluable history furthers that purpose. The history of an active organization tends to expand rapidly as the organization grows larger and more complex. The period since the Vietnam War, at which point the most recent edition ended, has been a significant one for the Army, a busy period of expanding roles and missions and of fundamental organizational changes. In particular, the explosion of missions and deployments since 11 September 2001 has necessitated the creation of additional, open-ended chapters in the story of the U.S. Army in action. This first volume covers the Army's history from its birth in 1775 to the eve of World War I. By 1917, the United States was already a world power. The Army had sent large expeditionary forces beyond the American hemisphere, and at the beginning of the new century Secretary of War Elihu Root had

proposed changes and reforms that within a generation would shape the Army of the future. But world war-global war-was still to come. The second volume of this new edition will take up that story and extend it into the twenty-first century and the early years of the war on terrorism and includes an analysis of the wars in Afghanistan and Iraq up to January 2009.
