kaplan maternity a: Motherhood and Representation E. Ann Kaplan, 2013-07-23 From novels of the nineteenth century to films of the 1990s, American culture, abounds with images of white, middle-class mothers. In *Motherhood and Representation*, E. Ann Kaplan considers how the mother appears in three related spheres: the historical, in which she charts changing representations of the mother from 1830 to the postmodernist present; the psychoanalytic, which discusses theories of the mother from Freud to Lacan and the French Feminists; and the mother as she is figured in cultural representations: in literary and film texts such as *East Lynne*, *Marnie* and *The Handmaid's Tale*, as well as in journalism and popular manuals on motherhood. Kaplan's analysis identifies two dominant paradigms of the mother as 'Angel' and 'Witch', and charts the contesting and often contradictory discourses of the mother in present-day America.

kaplan maternity a: Birth Settings in America National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on Assessing Health Outcomes by Birth Settings, 2020-05-01 The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. *Birth Settings in America: Outcomes, Quality, Access, and Choice* reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.

kaplan maternity a: *The Black Reproductive* Sara Clarke Kaplan, 2021-06-08 How Black women's reproduction became integral to white supremacy, capitalism, and heteropatriarchy—and remains key to their dismantling In the United States, slavery relied on the reproduction and other labors of unfree Black women. Nearly four centuries later, Black reproductivity remains a vital technology for the creation, negotiation, and transformation of sexualized and gendered racial categories. Yet even as Black reproduction has been deployed to resolve the conflicting demands of white supremacy, capitalism, and heteropatriarchy, Sara Clarke Kaplan argues that it also holds the potential to destabilize the oppressive systems it is supposed to maintain. The Black Reproductive convenes Black literary and cultural studies with feminist and queer theory to read twentieth- and twenty-first-century texts and images alongside their pre-emancipation counterparts. These provocative, unexpected couplings include how Toni Morrison's depiction of infanticide regenders Orlando Patterson's theory of social death, and how Mary Prince's eighteenth-century fugitive slave narrative is resignified through the representational paradoxes of Gayl Jones's blues novel *Corregidora*. Throughout, Kaplan offers new perspectives on Black motherhood and gendered labor, from debates over the relationship between President Thomas Jefferson and Sally Hemings, to the demise of racist icon Aunt Jemima, to discussions of Black reproductive freedom and abortion. The Black Reproductive gives vital insight into the historic and ongoing conditions of Black unfreedom, and points to the possibilities for a Black feminist practice of individual and collective freedom.

kaplan maternity a: *Traumatic Childbirth* Cheryl Tatano Beck, Jeanne Watson Driscoll, Sue Watson, 2013-07-18 Postpartum depression has become a more recognized mental illness over the past decade as a result of education and increased awareness. to 34% of new mothers reporting experiencing a traumatic childbirth and prevalence rates rising for high risk mothers, such as those who experience stillbirth or who had very low birth weight infants. This ground-breaking book brings together an academic, a clinician and a birth trauma activist. Each chapter discusses current research, women's stories, the common themes in the stories and the implications of these for practice, clinical case studies and a clinician's insights and recommendations for care. Topics covered include: mothers' perspectives, fathers' perspectives, the impact on breastfeeding, the impact on subsequent births, PTSD after childbirth and EMDR treatment for PTSD. This book is a valuable resource for health professionals who come into contact with new mothers, providing the most current and accurate information on traumatic childbirth. It also presents mothers' experiences in a manner that is accessible to women, their partners, and families.

kaplan maternity a: *Reducing Birth Defects* Institute of Medicine, Board on Global Health, Committee on Improving Birth Outcomes, 2003-10-27 Each year more than 4 million children are born with birth defects. This book highlights the unprecedented opportunity to improve the lives of children and families in developing countries by preventing some birth defects and reducing the consequences of others. A number of developing countries with more comprehensive health care systems are making significant progress in the prevention and care of birth defects. In many other developing countries, however, policymakers have limited knowledge of the negative impact of birth defects and are largely unaware of the affordable and effective interventions available to reduce the impact of certain conditions. *Reducing Birth Defects: Meeting the Challenge in the Developing World* includes descriptions of successful programs and presents a plan of action to address critical gaps in the understanding, prevention, and treatment of birth defects in developing countries. This study also recommends capacity building, priority research, and institutional and global efforts to reduce the incidence and impact of birth defects in developing countries.

kaplan maternity a: Vibrant and Healthy Kids National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Applying Neurobiological and Socio-Behavioral Sciences from Prenatal Through Early Childhood Development: A Health Equity Approach, 2019-12-27 Children are the foundation of the United States, and supporting them is a key component of building a successful future. However, millions of children face health inequities that compromise their development, well-being, and long-term outcomes, despite substantial scientific evidence about how those adversities contribute to poor health. Advancements in neurobiological and socio-behavioral science show that critical biological systems develop in the prenatal through early childhood periods, and neurobiological development is extremely responsive to environmental influences during these stages. Consequently, social, economic, cultural, and environmental factors significantly affect a child's health ecosystem and ability to thrive throughout adulthood. Vibrant and Healthy Kids: Aligning Science, Practice, and Policy to Advance Health Equity builds upon and updates research from Communities in Action: Pathways to Health Equity (2017) and From Neurons to Neighborhoods: The Science of Early Childhood Development (2000). This report provides a brief overview of stressors that affect childhood development and health, a framework for applying current brain and development science to the real world, a roadmap for implementing tailored interventions, and recommendations about improving systems to better align with our understanding of the significant impact of health equity.

pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

kaplan maternity a: Contradicting Maternity Carol Long, 2009-06-01 Drawing on rich and poignant interviews with mothers who have been diagnosed HIV-positive, *Contradicting Maternity* provides a rare perspective of motherhood from the mother's point of view. Whereas motherhood is often assumed to be a secondary identity compared to the central figure of the child, this book reverses the focus, arguing that maternal experience is important in its own right. The book explores the situation in which two very powerful identities, those of motherhood and of being HIVpositive, collide in the same moment. This collision takes place at the interface of complex, and often split, social and personal meanings concerning the sanctity of motherhood and the anxieties of HIV. The book offers an interpretation of how these personal and social meanings resonate with, and also fail to encompass, the experiences surrounding HIV positive mothers. Photographs, academic literature and the accounts of real women are read with both a psychodynamic and discursive eye, highlighting the contradictions within maternal experience, but also between maternal experience and the social imagination. *Contradicting Maternity* will appeal to scholars, students and practitioners in psychology, the social sciences and the health professions. The sensitive and readable analysis will also be of interest to mothers, whether HIV-positive or not.

kaplan maternity a: Preterm Birth Institute of Medicine, Board on Health Sciences Policy, Committee on Understanding Premature Birth and Assuring Healthy Outcomes, 2007-05-23 The increasing prevalence of preterm birth in the United States is a complex public health problem that requires multifaceted solutions. Preterm birth is a cluster of problems with a set of overlapping factors of influence. Its causes may include individual-level behavioral and psychosocial factors, sociodemographic and neighborhood characteristics, environmental exposure, medical conditions, infertility treatments, and biological factors. Many of these factors co-occur, particularly in those who are socioeconomically disadvantaged or who are members of racial and ethnic minority groups. While advances in perinatal and neonatal care have improved survival for preterm infants, those infants who do survive have a greater risk than infants born at term for developmental disabilities, health problems, and poor growth. The birth of a preterm infant can also bring considerable emotional and economic costs to families and have implications for public-sector services, such as health insurance, educational, and other social support systems. *Preterm Birth* assesses the problem with respect to both its causes and outcomes. This book addresses the need for research involving clinical, basic, behavioral, and social science disciplines. By defining and addressing the health and economic consequences of premature birth, this book will be of particular interest to health care professionals, public health officials, policy makers, professional associations and clinical, basic, behavioral, and social science researchers.

kaplan maternity a: Cinematernity Lucy Fischer, 2014-07-14 Noting that motherhood is a common metaphor for film production, Lucy Fischer undertakes the first investigation of how the topic of motherhood presents itself throughout a wide range of film genres. Until now discussions of maternity have focused mainly on melodramas, which, along with musicals and screwball comedies, have traditionally been viewed as women's cinema. Fischer defies gender-based classifications to show how motherhood has played a fundamental role in the overall cinematic experience. She argues that motherhood is often treated as a site of crisis—for example, the mother being blamed for the ills afflicting her offspring—then shows the tendency of certain genres to specialize in representing a particular social or psychological dimension in the thematics of maternity. Drawing on social history and various cultural theories, Fischer first looks at Rosemary's Baby to show the

prevalence of childbirth themes in horror films. In crime films (White Heat), she sees the linkage of male deviance and mothering. The Hand That Rocks the Cradle and The Guardian, both occult thrillers, uncover cultural anxieties about working mothers. Her discussion covers burlesques of male mothering, feminist documentaries on the mother-daughter relationship, trick films dealing with procreative metaphors, and postmodern films like High Heels, where fluid sexuality is the theme. These films tend to treat motherhood as a locus of irredeemable conflict, whereas History and Memory and High Tide propose a more sanguine, dynamic, and enabling view. Originally published in 1996. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. kaplan maternity a: The Obligated Self Mara H. Benjamin, 2018-05-24 Mara H. Benjamin contends that the physical and psychological work of caring for children presents theologically fruitful but largely unexplored terrain for feminists. Attending to the constant, concrete, and urgent needs of children, she argues, necessitates engaging with profound questions concerning the responsible use of power in unequal relationships, the transformative influence of love, human fragility and vulnerability, and the embeddedness of self in relationships and obligations. Viewing child-rearing as an embodied practice, Benjamin's theological reflection invites a profound reengagement with Jewish sources from the Talmud to modern Jewish philosophy. Her contemporary feminist stance forges a convergence between Jewish theological anthropology and the demands of parental caregiving.
