kyu students portal: *Accessible Technology and the Developing World* Michael Ashley Stein, Jonathan Lazar, 2021-10-13 When digital content and technologies are designed in a way that is inaccessible for persons with disabilities, they are locked out of commerce, education, employment, and access to government information. In developing areas of the world, as new technical

infrastructures are being built, it is especially important to ensure that accessibility is a key design goal. Unfortunately, nearly all research on Information and Communication Technology (ICT) accessibility and innovation for persons with disabilities-whether from the legal, technical, or development fields-has focused on developed countries, with very little being written about developing world initiatives. Accessible Technology and the Developing World aims to change this, by bringing increased attention to ICT accessibility in developing areas. This book brings together a unique combination of contributors with diverse disciplinary backgrounds, including authors from well-known non-governmental organizations, significant United Nations entities, and universities in both the developing and developed world. Together, they present a unique and much needed review of this critical and growing area of work, and primarily address three core themes - the lack of attention given to innovations taking place in the developing world, the need to ensure that infrastructures in the Global South do not present barriers to people with disabilities, and the need to exercise caution when applying techniques from the Global North to the Global South that won't transfer effectively. This book will be of use to researchers in the fields of civil rights, development studies, disability rights, disability studies, human-computer interaction and accessibility, human rights, international law, political science, and universal design.

kyu students portal: *The Age of Creativity* Emily Urquhart, 2020-09-01 A moving portrait of a father and daughter relationship and a case for late-stage creativity from Emily Urquhart, the bestselling author of *Beyond the Pale: Folklore, Family, and the Mystery of Our Hidden Genes*. "The fundamental misunderstanding of our time is that we belong to one age group or another. We all grow old. There is no us and them. There was only ever an us." — from *The Age of Creativity* It has long been thought that artistic output declines in old age. When Emily Urquhart and her family celebrated the eightieth birthday of her father, the illustrious painter Tony Urquhart, she found it remarkable that, although his pace had slowed, he was continuing his daily art practice of drawing, painting, and constructing large-scale sculptures, and was even innovating his style. Was he defying the odds, or is it possible that some assumptions about the elderly are flat-out wrong? After all, many well-known visual artists completed their best work in the last decade of their lives, Turner, Monet, and Cézanne among them. With the eye of a memoirist and the curiosity of a journalist, Urquhart began an investigation into late-stage creativity, asking: Is it possible that our best work is ahead of us? Is there an expiry date on creativity? Do we ever really know when we've done anything for the last time? *The Age of Creativity* is a graceful, intimate blend of research on ageing and creativity, including on progressive senior-led organizations, such as a home for elderly theatre performers and a gallery in New York City that only represents artists over sixty, and her experiences living and travelling with her father. Emily Urquhart reveals how creative work, both amateur and professional, sustains people in the third act of their lives, and tells a new story about the possibilities of elder-hood.

Features that are often less documented, yet of considerable interest in current times, such as the role of immunosuppression in neurological infections and newer microbiological diagnostic strategies are covered. The last section uniquely provides clinicians with relatable case scenarios. Real case descriptions are included, such as cases of fungal meningitis and other difficult-to-diagnose infections produced by viruses. This book serves as a guide for neurologists, medical microbiologists, and clinical practitioners who deal with patients suspected of neurological infection.

kyu students portal: *Microscale Testing in Aquatic Toxicology* Peter G. Wells, Kenneth Lee, Christian Blaise, 2018-05-04 Bioassays are among the ecotoxicologist's most effective weapons in the evaluation of water quality and the assessment of ecological impacts of effluents, chemicals, discharges, and emissions on the aquatic environment. kyu students portal: Regulation of Ventilation and Gas Exchange Donald Davies, 2012-12-02 *Regulation of Ventilation and Gas Exchange* is a comprehensive account of the regulation of ventilation and gas exchange. Topics covered include central nervous system regulation of ventilation; ventilatory response to muscular exercise; respiratory control in air-breathing ectotherms; and breathing during sleep. Hydrogen ion homeostasis of the cerebral extracellular fluid is also discussed, along with specific mechanisms for O₂ and CO transport in the lung and placenta. Comprised of nine chapters, this book begins with an overview of the neural elements that modify and/or are intrinsic to the respiratory rhythm. The next two chapters deal with the contribution of metabolic factors in the control of ventilation, paying particular attention to the importance of metabolic factors during muscular exercise and the specific role of ammonia in the regulation of respiration. A view of ventilatory control from a comparative standpoint, stressing both adaptive and mechanistic phenomena, is then presented. Subsequent chapters explore the regulation of breathing during sleep; regulation of cerebral extracellular fluid acid-base composition and its role in the control of ventilation and cerebral blood flow; carrier-mediated transport of respiratory gases; and measurement of ventilation-perfusion ratios is presented. The last chapter considers lung surfactant mechanics and addresses issues such as in vitro vs in situ measurements of surface tension and the effects of surface tension on pulmonary vascular resistance and interstitial pressure. This monograph is designed not only for respiratory physiologists but also for students and researchers in other areas with an inclination toward respiratory physiology.

kyu students portal: *Networked Information Technologies, Elections, and Politics* Jongwoo Han, 2012 Jongwoo Han's *Networked Information Technologies, Elections, and Politics: Korea and the United States* is a study on the changes that have been occurring in elections, politics, and democratic movements in both the United States and Korea. There has undoubtedly been a paradigm shift in political discourse, as the industrial age mass media-based public sphere gives way to the new networked information technologies (NNIT)-based cyber sphere. Analyzing and comparing Korea's presidential election in 2002 and the United States' 2008 presidential election, Han discusses the impact of NNITs in electoral politics, as previously apolitical young generations have become more involved and transformed themselves into both a cohesive voting bloc and a formidable constituency. Han also addresses the role of NNITs in Korea's beef crisis and President Obama's legislation battle to reform the U.S. health care system, revealing unprecedented opportunities to observe this major change occurring in political systems during the so-called Information Age.

kyu students portal: *Art Under Control in North Korea* Jane Portal, 2005-08-15 Nuclear bombs and geopolitical controversy are often the first things associated with North Korea and its volatile leader Kim Jong-II. Yet behind the secretive curtain of this isolated nation also lies a little-known and slowly expanding world of art. *Art Under Control in North Korea* is the first Western publication to explore the state-controlled role of art in North Korea. This timely volume places North Korean art in its historical, political, and social contexts, with a discussion on the state system of cultivating and promoting artists and an examination of the range of art produced, from painting and calligraphy to architecture and applied art. Portal offers an incisive analysis that compares the dictatorial control exerted over artists by North Korean leaders to that of past regimes. She also examines the ways in which archaeology has been employed for political ends to legitimize the present regime. *Art Under Control in North Korea* is an intriguing and vibrant volume that explores the creation of art under totalitarian rule and the ways art can subvert a dictatorial regime.

kyu students portal: *International Housing Market Experience and Implications for China* Rebecca L. H. Chiu, Zhi Liu, Bertrand Renaud, 2019-03-18 Recent rapid housing market expansion in China is presenting new challenges for policy makers, planners, business people, and citizens. Now that housing in middle-income China is driven by consumer choices and is no longer dominated by state policy decisions, housing policy issues in Chinese cities are becoming

increasingly similar to those encountered in other global housing markets. With soaring prices and imbalances in housing supply favoring high income groups and housing demand driven by rising inequality in household incomes, many middle and lower-income households face worsening choices in terms of the quality and location of their housing as well as greater financial difficulties, which together can have negative implications for standards of public health. This book examines the impact of these changes on the general population, as well as on aspiring homeowners and developers. The contributors look at the effect on the widening of wealth gaps, slower economic growth, and threats to political and social stability. Though focusing on China, the editors also present discussions of specific policy design challenges encountered in Australia, Japan, Korea, the Netherlands, the Nordic countries, Singapore, Taiwan, the UK, and the US. This book would be of interest to housing policy makers, as well as academics who are studying the social and political effects of the Chinese housing market.

kyu students portal: Cirrhosis, Hyperammonemia, and Hepatic Encephalopathy Santiago Grisolia, Vicente Felipo, 2012-12-06 This volume contains the papers presented in the International Summer Course on Cirrhosis, Hyperammonemia and Hepatic Encephalopathy, which was one of the prestigious Summer Course, of the Complutense University of Madrid held in El Escorial, Spain, during August 10-14, 1992. Liver cirrhosis is one of the main causes of death in western countries. In addition there is a series of liver dysfunctions including fulminant hepatic failure, Reye's syndrome and congenital defects of urea cycle enzymes that could lead to hepatic encephalopathy, coma and death. As a consequence of impaired liver function, the ability to detoxify ammonia by its incorporation into urea is diminished, resulting in increased ammonia levels in blood and brain. Hyperammonemia is considered one of the main factors in the mediation of hepatic encephalopathy and the classical clinical treatments are directed towards reducing blood ammonia levels. A part of the book is therefore devoted to the study of certain aspects of ammonia metabolism such as the regulation of the urea cycle, the main mechanism of ammonia detoxification in mammals, which is

located mainly in the liver. The metabolism of ammonia in other tissues, including brain, is also presented, as well as the effects of hyperammonemia on brain metabolism and function and on brain microtubules. The control of cerebral protein breakdown is reviewed. The classical and some recently proposed clinical treatments as well as nutritional considerations in the management of patients with liver failure are also discussed.

A static map is no longer enough; there is now demand for a dynamic representation. Time is of great importance when operating on real world geographical phenomena, especially when these are dynamic. Researchers in the field of Temporal Geographical Information Systems (TGIS) have been developing methods of incorporating time into geographical information systems. Spatio-temporal analysis embodies spatial modelling, spatio-temporal modelling and spatial reasoning and data mining. Advances in Spatio-Temporal Analysis contributes to the field of spatio-temporal analysis, presenting innovative ideas and examples that reflect current progress and achievements.

kyu students portal: *Architecture and Movement* Peter Blundell Jones, Mark Meagher, 2014-12-17 The experience of movement, of moving through buildings, cities, landscapes and in everyday life, is the only involvement most individuals have with the built environment on a daily basis. User experience is so often neglected in architectural study and practice. *Architecture and Movement* tackles this complex subject for the first time, providing the wide range of perspectives needed to tackle this multi-disciplinary topic. Organised in four parts it: documents the architect's, planner's, or designer's approach, looking at how they have sought to deploy buildings as a promenade and how they have thought or written about it. concentrates on the individual's experience, and particularly on the primacy of walking, which engages other senses besides the visual. engages with society and social rituals, and how mutually we define the spaces through which we move, both by laying out routes and boundaries and by celebrating thresholds. analyses how we deal with promenades which are not experienced directly but via other mediums such as computer models, drawings, film and television. The wide selection of contributors include academics and practitioners and discuss cases from across the US, UK, Europe and Asia. By mingling such disparate voices in a carefully curated selection of chapters, the book enlarges the understanding of architects, architectural students, designers and planners, alerting them to the many and complex issues involved in the experience of movement.

kyu students portal: *Pituitary Apoplexy* Mehmet Turgut, Ashok Kumar Mahapatra, Michael Powell, Natarajan Muthukumar, 2013-12-03 Pituitary apoplexy is a rare and life-threatening complication that occurs in 0.6-10.5% of all patients with pituitary adenomas. Unfortunately, pituitary apoplexy is often misdiagnosed before surgery. Furthermore, in spite of all the advances in imaging techniques and therapeutic methods, its optimal management is still controversial owing to the limited individual experience and the very variable clinical course of the condition. This book provides an in-depth review of knowledge of the management of pituitary apoplexy, with an emphasis on clinical and neuroradiological findings and treatment modalities, medical and surgical. In addition, it supplies clinicians and investigators with detailed information on current evidence and considers future areas of investigation and innovative therapeutic philosophies. Both the editors and the authors are leading international authorities in the field.
