nhais org intranet: Managing Clinical Risk Caroline Logan, Lorraine Johnstone, 2023-12-01
The second edition of *Managing Clinical Risk* is an authoritative guide on how to engage in risk assessment and management practice in evidence-based, accountable and effective ways. Over the course of a dozen chapters, each oriented around a brief case study reflecting a different area of risk, practitioners are offered guidance on how to read referrals, how to decide what information matters to their evaluations, how to speak to a person who may be reluctant to engage in an assessment of this kind, how to organise the information they have gathered in order to prepare a risk formulation that will in turn guide risk management, and how to communicate opinions and recommendations in ways that have an impact. The book provides an evidence-based understanding of risk assessment and management in key areas of practice – violence, sexual violence, suicidal and self-harmful behaviour, as well as family and relationship violence, organised criminal and group-based violence, and violent extremism. Practices relevant to understanding violent behaviour in individuals are contrasted with those better suited for working with groups and organisations. How practitioners can take account of the diversity of the clients with whom they work is a central consideration in every chapter. And helping practitioners develop the skills to enable them to formulate risk where there may be multiple areas of concern is a key objective of this book. All the contributors to this updated guide to effective practice are scholar-practitioners – experienced professionals with a track record of writing and teaching about risk assessment and management practice in their respective fields. Therefore, this book contains realistic rather than idealistic representations of the work required to prevent harmful behaviour by the kinds of clients they work with. Together, contributors combine theoretical and research knowledge with a wealth of practical skills, emphasising the collaborative and recovery-focused nature of modern risk management.

nhais org intranet: Transformational Government Great Britain: Cabinet Office, 2005-11-02 This document sets out the strategy to transform the business of government through increased and better use of technology. It is directed at three key areas: (1) the transformation of public services for the benefit of citizens, businesses, taxpayers and front-line staff; (2) the efficiency of the corporate services and infrastructure of government organizations; (3) the steps necessary to achieve effective delivery of technology for government. To achieve this, services must be designed around the citizen or business, not the provider. Government must move to a shared services culture, releasing efficiencies by standardisation, simplification and sharing. And there must be more professionalism in the planning, delivery, management, skills and governance of IT in government. A detailed action plan to implement the strategy will be approved by the Chief Information Officers' Council and the Service Transformation Board, and published before the end of this financial year. nhais org intranet: Delivering Successful IT-enabled Business Change Great Britain: National Audit Office, 2006-11-17 The Government set out its strategy to improve the delivery of public services through increased and better use of information technology (Cm. 6683, ISBN 0101668325) in November 2005, with the aim of ensuring services are designed around the needs of customers or citizens rather than the provider. Drawing on 24 case studies from the public and private sectors in the UK and overseas, this NAO report highlights examples of successful IT-enabled programmes and projects which have achieved tangible benefits for citizens and taxpayers and identifies good practice which can be transferred to new and existing government programmes and projects. It pinpoints three key issues in these success stories relating to: i) the degree of engagement by senior decision-makers; ii) the level of organisational understanding of what is needed to be an 'intelligent client' (in terms of having the necessary skills to negotiate effectively with suppliers and users); and

iii) the importance of realising the benefits of change by determining at the outset what the desired benefits are and how the project will be managed to ensure these benefits are optimised.

nhais org intranet: A Safer Place for Patients Great Britain: National Audit Office, 2005-11-03 The Department of Health estimates that one in ten patients admitted to NHS hospitals will be unintentionally harmed (a rate similar to other developed countries), due to incidents such as an injury from a fall, medication errors, equipment related incidents, record documentation errors and hospital acquired infections. About half of such incidents could have been avoided, if lessons from previous incidents had been learned. This NAO report examines the progress being made in the NHS to improve the patient safety culture, to encourage incident reporting and to learn lessons for the future. The report finds that most trusts have developed a predominantly open and fair reporting culture at the local level, driven largely by the Department of Health's clinical governance initiative and more effective risk management systems. However, a 'blame culture' still exists in some trusts, and there have been delays in establishing an effective national reporting system. There is scope for improving strategies for sharing good practice and for monitoring that lessons are learned.

nhais org intranet: Ages & Stages Learning Activities Elizabeth Twombly, Ginger Fink, 2005-01-31 These creative, photocopiable learning activities address the same five developmental areas as ASQ (see page 42)--communication, gross motor, fine motor, problem solving, and personal-social. Besides helping children develop early language and literacy skills, these activities encourage close parent-child interactions. Parents and children will have a new set of games and interactions every 4 months between 1 month and 5 years, each set complete with a description of typical development and five to eight activities that help children progress in the key developmental areas. Fun, age-appropriate, and inexpensive, these learning activities are perfect for sharing with parents of children who are developing typically or need nonintensive support in one or more areas.

nhais org intranet: Music and Technoculture René T. A. Lysloff, Leslie C. Gay, Jr., 2013-08-15 Moving from web to field, from Victorian parlor to 21st-century mall, the 15 essays gathered here yield new insights regarding the intersection of local culture, musical creativity and technological possibilities. Inspired by the concept of technoculture, the authors locate technology squarely in the middle of expressive culture: they are concerned with how technology culturally informs and infuses aspects of everyday life and musical experience, and they argue that this merger does not necessarily result in a cultural grayout, but instead often produces exciting new possibilities. In this collection, we find evidence of musical practices and ways of knowing music that are informed or even significantly transformed by new technologies, yet remain profoundly local in style and meaning. nhais org intranet: Cognitive Capitalism, Education, and Digital Labor Michael A. Peters, Ergin Bulut (Ed), 2011 Cognitive capitalism - sometimes referred to as 'third capitalism, ' after mercantilism and industrial capitalism - is an increasingly significant theory, given its focus on the socio-economic changes caused by Internet and Web 2.0 technologies that have transformed the mode of production and the nature of labor. The theory of cognitive capitalism has its origins in French and Italian thinkers, particularly Gilles Deleuze and Felix Guattari's *Capitalism and Schizophrenia*, Michel Foucault's work on the birth of biopower and Michael Hardt and Antonio Negri's *Empire and Multitude*, as well as the Italian Autonomist Marxist movement that had its origins in the Italian operaismo (workerism) of the 1960s. In this collection, leading international scholars explore the significance of cognitive capitalism for education, especially focusing on the question of digital labor.

nhais org intranet: Maps are Territories David Turnbull, Helen Watson, 1989 The map is not

the territory is a cartographic truism. It means that unless the map is drawn on a mile-to-mile scale and has the same physical characteristics as the territory itself, it cannot be perfectly accurate. But as David Turnbull demonstrates, the map is a metaphor not only for the territory it represents but for the culture that created it. As such, it takes on the meaning of the territory and its importance in that culture. In this ingenious book, Turnbull challenges common assumptions about the nature of cartography. In each of ten exhibits he addresses a seemingly basic concept—that a map is be factually accurate, for example, or that its symbols refer to concrete elements of the landscape—and then illustrates its complexities with maps from Western, Asian, and native cultures, from prehistoric to modern times, accompanied by quotations and historical background. The exhibits show how different cultures express their relation to the land, and how those differences ultimately define not only territory but also domination—religious, ideological, cultural, and political. An ideal introduction to the concepts of cartography, this book teaches not only how to read maps, but how to read them between the lines.

nhais org intranet: Cybersociety 2.0 Steve Jones, 1998-07-15 Cybersociety 2.0, the new edition of Steven G. Jones's Cybersociety, is also rooted in criticism and analysis of computer-mediated technologies to assist readers in becoming critically aware of the hype and hopes pinned on computer-mediated communication and the cultures that are emerging among Internet users. Both books are products of a particular moment in time and serve as snapshots of the concerns and issues that surround the burgeoning new technologies of communication. After a brief introduction to the history of computer-mediated communication, each chapter in this volume specifically highlights specific cyber societies and how computer-mediated communication effects the notion of self and its relationship to the community. Contributors probe issues of community, standards of conduct, communication, the means of fixing identity, knowledge, information, and the exercise of power in social relations. They also question how traditional sociological inquiry can adapt itself to most effectively study computer-mediated social formations. Both timely and thought-provoking, Cybersociety 2.0 belongs on the bookshelf of students and scholars in fields of communication, popular culture, American studies, and mass communication.

nhais org intranet: Times of the Technoculture Kevin Robins, Frank Webster, 2003-09-02 Times of the Technoculture explores the social and cultural impact of new technologies, tracing the origins of the information society from the coming of the machine with the industrial revolution to the development of mass production techniques in the early twentieth century. The authors look at how the military has controlled the development of the information society, and consider the centrality of education in government attempts to create a knowledge society. Engaging in contemporary debates surrounding the internet, Robins and Webster question whether it can really offer us a new world of virtual communities, and suggest more radical alternatives to the corporate agenda of contemporary technologies.

nhais org intranet: The Information Society Armand Mattelart, 2003-04-03 Mattelart unpacks the notion of the information society, and examines why it has become the dominant paradigm for social change. He also asks why the notion has come to be dominant in the absence of any critical examination of the conditions under which it has been produced.
