rally education answer key: *Democracy and Education* John Dewey, 1916 . Renewal of Life by Transmission. The most notable distinction between living and inanimate things is that the former maintain themselves by renewal. A stone when struck resists. If its resistance is greater than the force of the blow struck, it remains outwardly unchanged. Otherwise, it is shattered into smaller bits. Never does the stone attempt to react in such a way that it may maintain itself against the blow, much less so as to render the blow a contributing factor to its own continued action. While the living thing may easily be crushed by superior force, it none the less tries to turn the energies which act upon it into means of its own further existence. If it cannot do so, it does not just split into smaller pieces (at least in the higher forms of life), but loses its identity as a living thing. As long as it endures, it struggles to use surrounding energies in its own behalf. It uses light, air, moisture, and the material of soil. To say that it uses them is to say that it turns them into means of its own conservation. As long as it is growing, the energy it expends in thus turning the environment to account is more than compensated for by the return it gets: it grows. Understanding the word control in this sense, it may be said that a living being is one that subjugates and controls for its own continued activity the energies that would otherwise use it up. Life is a self-renewing process through action upon the environment.

rally education answer key: *School Breakfast and School Lunch Programs* United States. Congress. Senate. Committee on Agriculture, Nutrition, and Forestry, 1998 These hearing transcripts present testimony to the Senate Committee on Agriculture regarding the School Lunch and Breakfast Programs. Statements were made by several senators, the president of the American School Food Service Association (Connecticut); a school food service program director (Florida); the director of nutrition and education for the American School Food Service Association (Virginia); the director of the Children's Nutrition Research Center (Texas); the vice president of Food Operations at Disneyland Resort and Concept Development (California); and an assistant professor of clinical dietetics and nutrition, University of Pittsburgh (Pennsylvania). Witnesses maintained that the Nutrition Education and Training Program needs funding to maintain its current service level. It is necessary to modify the School Lunch Program to encourage student participation, make it easier for schools to qualify, and to reduce the administrative burden. Testimony also indicated that breakfast programs are vital to student nutrition, academic performance, and school attendance. School food service has become more efficient and more consumer-oriented, has expanded to supply meals to new audiences, and has increased the flexibility of service delivery. However, it is necessary to integrate food service within the educational day to enhance student nutrition knowledge and practice. Offering food choices may reduce food waste. The solution to major childhood nutritional problems is to apply current information to improve children's diets and to support nutrition research. An appendix to the transcripts contains additional statements, letters, and materials submitted. (KB)
