ranger medic handbook pdf: *Ranger Medic Handbook* U.S. Department of Defense, 2016-01-19 Historically in warfare, the majority of all combat deaths have occurred prior to a casualty ever receiving advanced trauma management. The execution of the Ranger mission profile in the Global War on Terrorism and our legacy tasks undoubtedly will increase the number of lethal wounds. Ranger leaders can significantly reduce the number of Rangers who die of wounds sustained in combat by simply targeting optimal medical capability in close proximity to the point of wounding. Directing casualty response management and evacuation is a Ranger leader task; ensuring technical medical competence is a Ranger Medic task. A solid foundation has been built for Ranger leaders and medics to be successful in managing casualties in a combat environment. The true success of the Ranger Medical Team will be defined by its ability to complete the mission and greatly reduce preventable combat death. Rangers value honor and reputation more than their lives, and as such will attempt to lay down their own lives in defense of their comrades. The Ranger Medic will do no less.

I will perform my job with such skill that the grim reaper will walk away empty-handed. 4. I will always remember that I must not only treat wounded Rangers, I must also carry them sometimes. I will maintain the physical conditioning necessary to accomplish this. 5. I will always remember that uniforms, weapons and supplies can all be DX'd but that each Ranger only comes with one body. I will never jeopardize the safety and/or recovery of that body by performing medical tasks beyond my skill and training. 6. I will always be cognizant of the fact that people do not suddenly get well after 1700 hours and on weekends, and that as such, I will willingly provide or coordinate for health care 24 hours a day, 7 days a week. 7. I will never do anything stupid because they or regulations require it to be so. I will find a way to accomplish my mission and serve the Rangers of this Regiment. 8. I will always remember that everything I use is paid for by US citizens. I will remember those tax dollars are collected from the American people and given to the Rangers because those people believe that in exchange for that money they will be kept safe from the tyrants of the world. 9. I will never forget that this is an Infantry unit supported by a medical team; not a medical team supported by a plethora of Infantry. 10. I will never forget that when the tyrants of the earth look towards the USA and plot mischief, they see a wall of cold steel backed up by determined men wearing Tan Berets; and then they plot their mischief somewhere else. ranger medic handbook pdf: The 71F Advantage National Defense University Press, 2010-09 Includes a foreword by Major General David A. Rubenstein. From the editor: 71F, or 71 Foxtrot, is the AOC (area of concentration) code assigned by the U.S. Army to the specialty of Research Psychology. Qualifying as an Army research psychologist requires, first of all, a Ph.D. from a research (not clinical) intensive graduate psychology program. Due to their advanced education, research psychologists receive a direct commission as Army officers in the Medical Service Corps at the rank of captain. In terms of numbers, the 71F AOC is a small one, with only 25 to 30 officers serving in any given year. However, the 71F impact is much bigger than this small cadre suggests. Army research psychologists apply their extensive training and expertise in the science of psychology and social behavior toward understanding, preserving, and enhancing the health, well being, morale, and performance of Soldiers and military families. As is clear throughout the pages of this book, they do this in many ways and in many areas, but always with a scientific approach. This is the 71F advantage: applying the science of psychology to understand the human dimension, and developing programs, policies, and products to benefit the person in military operations. This book grew out of the April 2008 biennial conference of U.S. Army Research Psychologists, held in Bethesda, Maryland. This meeting was to be my last as Consultant to the Surgeon General for Research Psychology, and I thought it would be a good idea to publish proceedings, which had not been done before. As Consultant, I'd often wished for such a document to help explain to people what it is that Army Research Psychologists do for a living. In addition to our core group of 71Fs, at the Bethesda 2008 meeting we had several brand-new members, and a number of distinguished retirees, the grey-beards of the 71F clan. Together with longtime 71F colleagues Ross Pastel and Mark Vaitkus, I also saw an unusual opportunity to capture some of the history of the Army Research Psychology specialty while providing a representative sample of current 71F research and activities. It seemed to us especially important to do this at a time when the operational demands on the Army and the total force were reaching unprecedented levels, with no sign of easing, and with the Army in turn relying more heavily on research psychology to inform its programs for protecting the health,

well being, and performance of Soldiers and their families.

ranger medic handbook pdf: SOF Combat Casualty Care Handbook Combined Arms Center , This handbook was previously distributed as a supplement to the Journal of Special Operations Medicine. The realm of special operations forces (SOF) medicine is a unique and ever-changing one that demands specialized training for our joint SOF. Managing trauma on today's battlefield presents a dynamic array of challenges where limited resources can be rapidly overwhelmed. An austere environment, hostile gunfire, and delays in casualty evacuation (CASEVAC) are the norms for the special operations medic. The material in this handbook was gleaned from special operations medics operating in the Global War on Terrorism and other operational environments. It should not be viewed as a substitute for the professional training and judgment of special operations medics; rather, it is designed to be a hip-pocket reference on the tactics, techniques, and procedures (TTP) of SOF-relevant tactical combat casualty care. Key Lessons Ninety percent of combat loss of life occurs before casualties ever reach a military treatment facility (MTF); treatment prior to casualty evacuation is vital. Litter carries are fundamental for good patient care; they prevent further injury and get individuals off target as soon as possible. Rehearse manual carry methods prior to deployment. Every special operations warfighter should carry a tourniquet and be thoroughly familiar with its application. When managing multiple casualties, apply the principles of triage in classifying the priority of treatment and evacuation. Rehearse and employ all of the mechanics of CASEVAC from the point of injury to the handover at a MTF. This handbook provides a number of considerations when employing medical support to SOF in combat. The challenges are numerous, but the special operations medic must deliver medical care to save Soldiers' lives. The collection of TTP in this handbook will enhance the medic's ability to determine the optimum method to deliver casualty survival assistance.

ranger medic handbook pdf: Ranger Medic Handbook Defense, 2016-01-19 Historically in warfare, the majority of all combat deaths have occurred prior to a casualty ever receiving advanced trauma management. The execution of the Ranger mission profile in the Global War on Terrorism and our legacy tasks undoubtedly will increase the number of lethal wounds. Ranger leaders can significantly reduce the number of Rangers who die of wounds sustained in combat by simply targeting optimal medical capability in close proximity to the point of wounding. Directing casualty response management and evacuation is a Ranger leader task; ensuring technical medical competence is a Ranger Medic task. A solid foundation has been built for Ranger leaders and medics to be successful in managing casualties in a combat environment. The true success of the Ranger Medical Team will be defined by its ability to complete the mission and greatly reduce preventable combat death. Rangers value honor and reputation more than their lives, and as such will attempt to lay down their own lives in defense of their comrades. The Ranger Medic will do no less.

ranger medic handbook pdf: Eyes Behind the Lines: US Army Long-Range Reconnaissance and Surveillance Units James F. Gebhardt, 2005 Eyes Behind the Lines: US Army Long-Range Reconnaissance and Surveillance Units is the 10th study in the Combat Studies Institute (CSI) Global War on Terrorism (GWOT) Occasional Paper series. This work is an outgrowth of concerns identified by the authors of On Point: The United States Army in Operation IRAQI FREEDOM. Specifically, these authors called into question the use of long-range surveillance (LRS) assets by commanders during that campaign and suggested an assessment ought to be made about their continuing utility and means of employment. This revision contains some important additional information the author received after this book was originally published Major (Retired) James Gebhardt, of CSI, researched and wrote this Occasional Paper with that end in view. In this study, Gebhardt surveys the US Army's historical experience with LRRP and LRS units from the 1960s Cold War and Vietnam War, through their resurgence in the 1980s and use in Operations JUST CAUSE and DESERT STORM, to the advent of the GWOT. The paper's analytical framework examines each era of LRS units in terms of doctrine, organization, training, materiel, leadership, and personnel. In doing so, the author makes a strong case for continuing the LRS capability in the Army's force structure. The variety of environments and enemies likely to be faced by the military in the GWOT continues to demand the unique human intelligence abilities of trained and organized LRS units. As the Army leads the Armed Forces of the United States in combating terrorists where they live, the lessons found in this survey remain timely and relevant.
