sentry 1250 safe manual: *Engineers of Independence* Paul K. Walker, 2002-08 This collection of documents, including many previously unpublished, details the role of the Army engineers in the American Revolution. Lacking trained military engineers, the Americans relied heavily on foreign officers, mostly from France, for sorely needed technical assistance. Native Americans joined the foreign engineer officers to plan and carry out offensive and defensive operations, direct the erection of fortifications, map vital terrain, and lay out encampments. During the war Congress created the Corps of Engineers with three companies of engineer troops as well as a separate geographer's department to assist the engineers with mapping. Both General George Washington and Major General Louis Leb  que Duportail, his third and longest serving Chief Engineer, recognized the disadvantages of relying on foreign powers to fill the Army's crucial need for engineers. America, they contended, must train its own engineers for the future. Accordingly, at the war's end, they suggested maintaining a peacetime engineering establishment and creating a military academy. However, Congress rejected the proposals, and the Corps of Engineers and its companies of sappers and miners mustered out of service. Eleven years passed before Congress authorized a new establishment, the Corps of Artillerists and Engineers.

sentry 1250 safe manual: *Hold High the Torch* Kenneth W. Condit, 2017-01-12 *Hold High the Torch*, the first of a series of regimental and squadron histories by the Historical Branch, G-3 Division, Headquarters U.S. Marine Corps, is designed primarily to acquaint the members of the 4th Marines, past and present, with the history of their regiment. In addition, it is hoped this volume will enlarge public understanding of the Marine Corps' worth both in limited war and as a force in

readiness. During most of its existence the 4th Marines was not engaged in active military operations, but service of the regiment in China, the Dominican Republic, and off the west coast of Mexico, was typical of the Marine Corps' support of national policy. In many of its combat operations, the 4th Marines was only one element of a much larger force. In other instances, as in the Dominican Republic and China, the regiment was a subordinate unit in situations which were essentially political and diplomatic. Only so much of these higher echelon activities as are essential to an understanding of the 4th Marines story have been told. This is a regimental history and the focus is therefore on the 4th Marines.

sentry 1250 safe manual: *Strategy and Command* Louis Morton, 2015-07-11 For the United States, full involvement in World War II began and ended in the Pacific Ocean. Although the accepted grand strategy of the war was the defeat of Germany first, the sweep of Japanese victory in the weeks and months after Pearl Harbor impelled the United States to move as rapidly as it could to stem the enemy tide of conquest in the Pacific. Shocked as they were by the initial attack, the American people were also united in their determination to defeat Japan, and the Pacific war became peculiarly their own affair. In this great theater it was the United States that ran the war, and had the determining voice in answering questions of strategy and command as they arose. The natural environment made the prosecution of war in the Pacific of necessity an interservice effort, and any real account of it must, as this work does, take into full account the views and actions of the Navy as well as those of the Army and its Air Forces. These are the factors-a predominantly American theater of war covering nearly one-third the globe, and a joint conduct of war by land, sea, and air on the largest scale in American history-that make this volume on the Pacific war of particular significance today. It is the capstone of the eleven volumes published or being published in the Army's World War II series that deal with military operations in the Pacific area, and it is one that should command wide attention from the thoughtful public as well as the military reader in these days of global tension.
