sida badge dfw: Shakespeare and the Just War Tradition Professor Paola Pugliatti, 2013-04-28 Brought to light in this study is a connection between the treatment of war in Shakespeare's plays and the issue of the 'just war', which loomed large both in religious and in lay treatises of Shakespeare's time. The book re-reads Shakespeare's representations of war in light of both the changing historical and political contexts in which they were produced and of Shakespeare's possible connection with the culture and ideology of the European just war tradition. But to discuss Shakespeare's representations of war means, for Pugliatti, not simply to examine his work from a literary point of view or to historicize those representations in connection with the discourses (and the practice) of war which were produced in his time; it also means to consider or re-consider present-day debates for or against war and the kind of war ideology which is trying to assert itself in our time in light of the tradition which shaped those discourses and representations and which still substantiates our 'moral' view of war.

sida badge dfw: The Apple Grower Michael Phillips, 2005 For decades fruit growers have sprayed their trees with toxic chemicals in an attempt to control a range of insect and fungal pests. Yet it is possible to grow apples responsibly, by applying the intuitive knowledge of our great-grandparents with the fruits of modern scientific research and innovation. Since *The Apple Grower* first appeared in 1998, orchardist Michael Phillips has continued his research with apples, which have been called organic's final frontier. In this new edition of his widely acclaimed work, Phillips delves even deeper into the mysteries of growing good fruit with minimal inputs. Some of the cutting-edge topics he explores include: The use of kaolin clay as an effective strategy against curculio and borers, as well as its limitations Creating a diverse, healthy orchard ecosystem through understory management of plants, nutrients, and beneficial microorganisms How to make a small apple business viable by focusing on heritage and regional varieties, value-added products, and the community orchard model The author's personal voice and clear-eyed advice have already made *The Apple Grower* a classic among small-scale growers and home orchardists. In fact, anyone serious about succeeding with apples needs to have this updated edition on their bookshelf.

sida badge dfw: Pre-Incident Indicators of Terrorist Incidents Brent L. Smith, 2011 This is a print on demand edition of a hard to find publication. Explores whether sufficient data exists to examine the temporal and spatial relationships that existed in terrorist group planning, and if so, could patterns of preparatory conduct be identified? About one-half of the terrorists resided, planned, and prepared for terrorism relatively close to their eventual target. The terrorist groups existed for 1,205 days from the first planning meeting to the date of the actual/planned terrorist incident. The planning process for specific acts began 2-3 months prior to the terrorist incident. This study examined selected terrorist groups/incidents in the U.S. from 1980-2002. It provides for the potential to identify patterns of conduct that might lead to intervention prior to the commission of the actual terrorist incidents. Illustrations.
