trane e library: Handbook of Communication and Aging Research Jon F. Nussbaum, Justine Coupland, 2004-04-12 This second edition of the Handbook of Communication and Aging Research captures the ever-changing and expanding domain of aging research. Since it was first recognized that there is more to social aging than demography, gerontology has needed a communication perspective. Like the first edition, this handbook sets out to demonstrate that aging is not only an individual process but an interactive one. The study of communication can lead to an understanding of what it means to grow old. We may age physiologically and chronologically, but our social aging--how we behave as social actors toward others, and even how we align ourselves with or come to understand the signs of difference or change as we age--are phenomena achieved primarily through communication experiences. Synthesizing the vast amount of research that has been published on communication and aging in numerous international outlets over the last three decades, the book's contributors include scholars from North America and the United Kingdom who are active researchers in the perspectives covered in their particular chapter. Many of the chapters work to deny earlier images of aging as involving normative decrement to provide a picture of aging as a process of development involving positive choices and providing new opportunities. A recurring theme in many chapters is that of the heterogeneity of the group of people who are variously categorized as older, aged, elderly, or over 65. The contributors review the literature analytically, in a way that reveals not only current theoretical and methodological approaches to communication and aging research but also sets the future agenda. This handbook will be of great interest to scholars and researchers in gerontology, developmental psychology, and communication, and, in this updated edition, will continue to play a key role in the study of communication and aging.

trane e library: Black Education Joyce E. King, 2006-04-21 This volume presents the findings and recommendations of the American Educational Research Association's (AERA) Commission on Research in Black Education (CORIBE) and offers new directions for research and practice. By commissioning an independent group of scholars of diverse perspectives and voices to investigate major issues hindering the education of Black people in the U.S., other Diaspora contexts, and Africa, the AERA sought to place issues of Black education and research practice in the forefront of the agenda of the scholarly community. An unprecedented critical challenge to orthodox thinking, this book makes an epistemological break with mainstream scholarship. Contributors present research on proven solutions--best practices--that prepare Black students and others to achieve at high levels of academic excellence and to be agents of their own socioeconomic and cultural transformation. These analyses and empirical findings also link the crisis in Black education to embedded ideological biases in research and the system of thought that often justifies the abject state of Black education. Written for both a scholarly and a general audience, this book demonstrates a transformative role for research and a positive role for culture in learning, in the academy, and in community and cross-national contexts. Volume editor Joyce E. King is the Benjamin E. Mays Endowed Chair of Urban Teaching, Learning and Leadership at Georgia State University and was chair of CORIBE. trane e library: Agent Culture Sabine Payr, Robert Trappl, 2004-06-11 This volume began with a workshop of the Austrian Research Institute for Artificial Intelligence held in 2001. Concerned with embodied agents as cultural objects and subjects, the book is divided into three parts. It begins by drawing attention to the cultural embeddedness of technology in general and agent design in particular, as a reminder that there cannot be an agent without culture. The section concludes that agent systems not only can be used to establish a shared understanding, but can also promote the diversity of understanding and identity. Part II consists of chapters dealing with design concepts and reflections on cross-cultural believability. It suggests how an agent's behavior may be adapted to the cultural context of application while maintaining consistency and describes an approach based on the OCC model--which is widely known and used in the embodied agents research community. Next, the section suggests that Affect Control Theory--an empirically-based, mathematically-elaborated perspective on microsociology--can be incorporated into agents in order to give them a capacity for normative role behaviors and emotional displays. Subsequent chapters pass on from more general considerations to the design and implementation of cross-cultural characters and present virtual character design from the perspective of the artist and the practitioner in stressing that corporate culture and audience culture(s) both guide the design choices, but the resulting culturally adapted agent is handcrafted. It ends with a chapter that reports cross-cultural user studies made in the UK, Austria, and Croatia. Part III discusses the potential of agents as mediators in intercultural communication. It includes an overview of the ways in which embodied agents are and could be used to coach the acquisition of intercultural communication skills, followed by a chapter that suggests agents could be used to intentionally mold intercultural communication. The last chapter addresses the need for a shared sense of community in large-scale collaboration systems for multi-national organizations that transcends any one cultural orientation and that is truly multicultural.

trane e library: Funds of Knowledge Norma Gonzalez, Luis C. Moll, Cathy Amanti, 2006-04-21 The concept of funds of knowledge is based on a simple premise: people are competent and have knowledge, and their life experiences have given them that knowledge. The claim in this book is that first-hand research experiences with families allow one to document this competence and knowledge, and that such engagement provides many possibilities for positive pedagogical actions. Drawing from both Vygotskian and neo-sociocultural perspectives in designing a methodology that

views the everyday practices of language and action as constructing knowledge, the funds of knowledge approach facilitates a systematic and powerful way to represent communities in terms of the resources they possess and how to harness them for classroom teaching. This book accomplishes three objectives: It gives readers the basic methodology and techniques followed in the contributors' funds of knowledge research; it extends the boundaries of what these researchers have done; and it explores the applications to classroom practice that can result from teachers knowing the communities in which they work. In a time when national educational discourses focus on system reform and wholesale replicability across school sites, this book offers a counter-perspective stating that instruction must be linked to students' lives, and that details of effective pedagogy should be linked to local histories and community contexts. This approach should not be confused with parent participation programs, although that is often a fortuitous consequence of the work described. It is also not an attempt to teach parents how to do school although that could certainly be an outcome if the parents so desired. Instead, the funds of knowledge approach attempts to accomplish something that may be even more challenging: to alter the perceptions of working-class or poor communities by viewing their households primarily in terms of their strengths and resources, their defining pedagogical characteristics. *Funds of Knowledge: Theorizing Practices in Households, Communities, and Classrooms* is a critically important volume for all teachers and teachers-to-be, and for researchers and graduate students of language, culture, and education.

trane e library: Motivation, Emotion, and Cognition David Yun Dai, Robert J. Sternberg, 2004-07-13 The central argument of this book is that cognition is not the whole story in understanding intellectual functioning and development. To account for inter-individual, intra-individual, and developmental variability in actual intellectual performance, it is necessary to treat cognition, emotion, and motivation as inextricably related. *Motivation, Emotion, and Cognition: Integrative Perspectives on Intellectual Functioning and Development*: *represents a new direction in theory and research on intellectual functioning and development; *portrays human intelligence as fundamentally constrained by biology and adaptive needs but modulated by social and cultural forces; and *encompasses and integrates a broad range of scientific findings and advances, from cognitive and affective neurosciences to cultural psychology, addressing fundamental issues of individual differences, developmental variability, and cross-cultural differences with respect to intellectual functioning and development. By presenting current knowledge regarding integrated understanding of intellectual functioning and development, this volume promotes exchanges among researchers concerned with provoking new ideas for research and provides educators and other practitioners with a framework that will enrich understanding and guide practice.

trane e library: *Human Spatial Memory* Gary L. Allen, 2004-04-12 The chapters in *Human Spatial Memory: Remembering Where* present a fascinating picture of an everyday aspect of mental life that is as intriguing to people outside of academia as it is to scientists studying human cognition and behavior. The questions are as old as the study of mind itself: How do we remember where objects are located? How do we remember where we are in relation to other places? What is the origin and developmental course of spatial memory? What neural structures are involved in remembering where? How do we come to understand scaled-down versions of places as symbolic representations of actual places? Although the questions are old, some of the answers-in-progress are new, thanks to some innovative theorizing, solid experimental work, and revealing applications of new technologies, such as virtual environments and brain imaging techniques. This volume includes a variety of theoretical, empirical, and methodological advances that invite readers to make their own novel connections between theory and research. Scholars who study spatial cognition can benefit from examining the latest from well-established experts, as well as milestone contributions

from early-career researchers. This combination provides the reader with a sense of past, present, and future in terms of spatial memory research. Just as important, however, is the value of the volume as a touchstone resource for researchers who study perception, memory, or cognition but who are not concerned primarily with the spatial domain. All readers may find the fact that this volume violates the trend toward an ever-narrowing specialization refreshing. Chapters from cognitive psychologists are alongside chapters by developmentalists and neuroscientists; results from field studies are just pages away from those based on fMRI during observation of virtual displays. Thus, the book invites integrative examination across disciplines, research areas, and methodological approaches.

Creativity Across Domains: Faces of the Muse sorts through the sometimes-confusing theoretical diversity that domain specificity has spawned. It also brings together writers who have studied creative thinkers in different areas, such as the various arts, sciences, and communication/leadership. Each contributor explains what is known about the cognitive processes, ways of conceptualizing and solving problems, personality and motivational attributes, guiding metaphors, and work habits or styles that best characterize creative people within the domain he or she has investigated. In addition, this book features: *an examination of how creativity is similar and different in diverse domains; *chapters written by an expert on creativity in the domain about which he or she is writing; *a chapter on creativity in psychology which examines patterns of performance leading to creative eminence in different areas of psychology; and *a final chapter proposing a new theory of creativity--the Amusement Park Theoretical Model. This book appeals to creativity researchers and students of creativity; cognitive, education, social, and developmental psychologists; and educated laypeople interested in exploring their own creativity.

Wickrama, 2004-04-12 The chapters in this volume were developed as a follow-up to the Summer Institute entitled Continuity and Change: Family Structure and Process conducted by the second Family Research Consortium. The goal of this book is to provide readers with a greater understanding of both the conceptual issues involved in the study of continuity and change in families, and also some of the methodological approaches that have been developed for investigating families over time.

trane e library: Evidence-Based Treatment of Stuttering Anne K. Bothe, 2004-07-19 This book is the result of a State-of-the-Art-Conference held at the University of Georgia dedicated to the evidence-based treatment of stuttering. An international group of prominent fluency researchers and clinicians were invited to present and discuss current data and issues related to the treatment of stuttering. The topic was defined to include evidence about stuttering, evidence about stuttering treatment, and discussions of how that evidence should guide the continuing research and practice. The explicit link between empirical evidence and suggestions for clinical practice is the goal of the book. The book begins by addressing the notion of evidence-based practice and considers its implications for stuttering treatment. Part II presents the intersection of the nature of stuttering; the theories of stuttering; and the implications of nature, theory, and other knowledge for stuttering treatment decisions. Part III provides two of the many measurement issues facing stuttering treatment followed by Part IV, which is devoted to the quality of treatment research evidence, for specific treatments and in terms of some more general methodological and professional issues. The final part summarizes the clinical recommendations made throughout the book and discusses evidence-based, outcomes-focused clinical decisions for stuttering. These chapters are intended to provide state-of-the-art information to researchers, clinicians, and students who are interested in

developing, identifying, or using the best possible evidence-based treatments for stuttering.

Strategies and Shortcuts for Online Research provides readers of all skill levels with efficient search strategies for locating, retrieving, and evaluating information on the Internet. Utilizing her experience as a reporter working on deadline, author Barbara G. Friedman offers the most effective methods for finding useful and trustworthy data online, and presents these techniques in a straightforward, user-friendly manner. Anyone who uses the Internet for research will find much of value here, including techniques that harness the power of advanced searches to optimize search results, avoid advertising clutter, and locate low- or no-cost databases. Screen captures and diagrams illustrate the steps, rationale, and results to accompany various search strategies. This book emphasizes techniques that make the Web work for individuals rather than for advertisers, such as choosing the most appropriate search engine for the job and tweaking its advanced options to narrow a search and optimize results; identifying cost-free sources of online data; using creative approaches to locate information; evaluating the integrity of online data; and protecting the privacy of the researchers and the researched. Web Search Savvy is an essential resource for students, scholars, and practitioners in journalism and mass communications, and it offers practical and useful guidance for anyone researching information online.

This book examines the changing linguistic and cultural identities of bilingual students through the narratives of four Japanese returnees (kikokushijo) as they spent their adolescent years in North America and then returned to Japan to attend university. As adolescents, these students were polarized toward one language and culture over the other, but through a period of difficult readjustment in Japan they became increasingly more sophisticated in negotiating their identities and more appreciative of their hybrid selves. Kanno analyzes how educational institutions both in their host and home countries, societal recognition or devaluation of bilingualism, and the students' own maturation contributed to shaping and transforming their identities over time. Using narrative inquiry and communities of practice as a theoretical framework, she argues that it is possible for bilingual individuals to learn to strike a balance between two languages and cultures. *Negotiating Bilingual and Bicultural Identities: Japanese Returnees Betwixt Two Worlds*: *is a longitudinal study of bilingual and bicultural identities--unlike most studies of bilingual learners, this book follows the same bilingual youths from adolescence to young adulthood; *documents student perspectives--redressing the neglect of student voice in much educational research, and offering educators an understanding of what the experience of learning English and becoming bilingual and bicultural looks like from the students' point of view; and *contributes to the study of language, culture, and identity by demonstrating that for bilingual individuals, identity is not a simple choice of one language and culture but an ongoing balancing act of multiple languages and cultures. This book will interest researchers, educators, and graduate students who are concerned with the education and personal growth of bilingual learners, and will be useful as text for courses in ESL/bilingual education, TESOL, applied linguistics, and multicultural education.

trane e library: The Ambiguity of Teaching to the Test William A. Firestone, Roberta Y. Schorr, Lora F. Monfils, 2004-04-12 Testing is one of the most controversial of all state and federal educational policies. The effects of testing are quite ambiguous. The same test may lead to different

consequences in different circumstances, and teachers may use very different strategies to prepare students for tests. Although most experts agree that mandatory testing leads to teaching to the test, they disagree about whether it leads to meaningless drill, wasted time, de-professionalizing teachers, and demotivating students, or to more challenging and thoughtful curricula, more engaging teaching, increased student motivation, and increased accountability. To help sort through this ambiguity and provide a firmer basis for decisions, *The Ambiguity of Teaching to the Test: Standards, Assessment, and Educational Reform* offers a hard look at the effects of state testing, and thoroughly examines the ambiguity of test preparation and how test preparation practices are influenced by what teachers know and the leadership coming from the school and district. Drawing on data from a three-year study of New Jersey's testing policy in elementary mathematics and science, it helps to explain the variety of ways that teachers modify their teaching in response to state tests, raises important questions, and offers useful guidance on how state policymakers and local and district school administrators can implement policies that will improve educational equity and performance for all students. It also offers an in-depth analysis of classroom practices that should inform teachers and teacher educators whose goal is to meaningfully implement conceptually based teaching practices. This comprehensive look at the statewide variation in testing practice features: *a data-based, non-ideological treatment of how testing affects teachers, in a field characterized by ideologically driven beliefs and by anecdotes; *an extensive and well-integrated combination of qualitative and quantitative data sources that provide a statewide overview, as well as an in-depth analysis of teachers and classrooms; *a careful analysis of the variety of forms of teaching to the test; and *a multilevel exploration of how a variety of personal and leadership factors can influence teaching to the test. This is an important book for researchers, professionals, and students in educational testing, educational policy, educational administration, mathematics and science education, educational reform, and the politics and sociology of education. It will also prove useful for state policymakers, school and district leaders, and teacher educators and curriculum specialists who are making decisions about how to design and respond to new testing systems.
