The book's contributors explore North American and European understandings of the relationship between physical movement, bodily health, technological innovation, medical concepts, natural environments, and architectural settings from the nineteenth century through the heyday of modernist architectural experimentation in the 1920s and 1930s and onward into the 1970s. Not only does the book focus on how professionals have engaged with the architecture of healing and the body, it also explores how urban dwellers have strategized and modified their living environments themselves to create a kind of vernacular modernist architecture of health in their homes, gardens, and backyards. This new work builds upon a growing interdisciplinary field incorporating the urban humanities, geography, architectural history, the history of medicine, and critical visual studies that reflects our current preoccupation with the body and its corresponding therapeutic culture.

This volume addresses the implications of multi-scaled topographic data for contemporary archaeological practice in a rapidly developing field, drawing on examples of ongoing projects and reflections on best practice. Twenty papers from

across Europe explore the implications of these digital 3D datasets for the recording and interpretation of archaeological topography, whether at the landscape, site or artifact scale. The papers illustrate the variety of ways in which we engage with archaeological topography through 3D data, from discussions of its role in landscape archaeology, to issues of context and integration, and to the methodological challenges of processing, visualization and manipulation. Critical reflection on developing practice and implications for cultural resource management and research contextualize the case studies and applications, illustrating the diverse and evolving roles played by multi-scalar topographic data in contemporary archaeology.

xyz router manual: The Evolution of Human Cooperation and Community Development

August John Hoffman, Michelle Filkins, Saul Alamilla, 2021-02-12 Communities today face unprecedented racial tension, conflict, and turmoil. Social unrest, political rhetoric, authoritarian rulers, and economic disparities contribute to unprecedented levels of community violence and extremism. The Evolution of Human Cooperation and Community Development: A Greener Approach to Understanding the Dynamics of Conflict proposes a more comprehensive and community-oriented approach to address conflict through the development of community resources and ecologically sustainable green space programs, such as community gardening programs. The authors draw on empirical research to identify how resources may be utilized to promote increased positive intergroup contact and provide greater collaboration among community residents. This book provides the essential interpersonal mechanisms to achieve a more resilient, empowered, and peaceful community.

xyz router manual: Hearing Impairment and Disability Ariel Tenenbaum, Joav Merrick, Mohd N. Zakaria, 2020 Much research has been conducted to provide researchers and hearing healthcare professionals with updated information in regard to hearing assessments, results interpretation and case management. This ongoing research is particularly imperative to guide clinicians with optimized methods in assessing and managing pediatric patients with hearing impairment and disability. As such, tremendous research efforts have been made in determining the most optimum methods in assessing hearing using both subjective and objective tests. Since hearing loss can occur due to disrupted peripheral and/or central auditory pathway, there is also a growing interest to study children with auditory processing disorder (APD). Even though notable achievements have been observed in understanding APD, more research is required, particularly in establishing a gold standard APD test and its specific interventions. Additionally, having an objective test such as speech-evoked auditory brainstem response is beneficial to understand how speech sounds are encoded within the brainstem region in hearing-impaired children, as well as in those with compromised neural function. In this book, we have gathered research from Malaysia and India in this field and hope it will be of interest to our readers--

xyz router manual: New Modes Chris Bryant, Caspar Rodgers, Tristan Wigfall, 2018-10-08 New modes of practice are now emerging in architecture. Rural Studio, Exyzt, Muf, Assemble and many more have led the way by challenging conventional ideas of 'The Architect' and reclaiming the notion of architecture as something public that should work ultimately towards the collective good. This quiet revolution is born out of a crisis in the profession and a wider vacuum in the political, environmental and economic situation. On the one hand, architecture as a profession has seen its influence diminish rapidly over the last 50 years through privatisation and the dominance of finance, while on the other hand it has also lacked collective courage and readiness to evolve. Without necessarily being aware of each other, studios around the world are now redefining the profession of architecture as something more proactive, self-aware and political. They are broadening their skill sets and becoming deeply involved in their projects, initiating them themselves, financing them and running them. Though much of this work is dealing with local issues at a relatively small scale, it is inherently ambitious with global application. Contributors include: Shumi Bose, Indy Johar, Alison Killing, Douglas Murphy, and Finn Williams Featured architects: Atelier d'Architecture Autogérée (AAA), adamo-faiden; Baupiloten, Grupo Toma, Hector, Inteligencias Colectivas, raumlaborberlin, studioBASAR, Studio GutGut, Taller Ken, and We Made That.
