business driven information systems baltzan pdf: *Be the Business* Martha Heller, 2016-10-04 Remember the '70s? Way back then, IT was a mainframe that sat in some room and only a few people had a key. Flash forward a decade, and IT was a limited set of systems irrelevant to the vast majority of employees and customers. But today, all of the sudden, technology belongs to everyone. Because of the suddenness of this revolution in technology adoption, most IT organizations have not had enough time to evolve into a comfortable integration with the rest of the company. This lack of comfortable integration has led to confusion over who is truly accountable for the return on technology investments, how much influence IT leaders should have over a company's business strategy, and whether CEOs need to hire Chief Digital Officers onto their senior leadership teams. Through interviews with dozens of CIOs, Heller has created a snapshot of what CIOs are doing to lead IT in a climate where technology belongs to everyone. She addresses how CIOs are changing their operating models, their approaches to talent development, and their assessment of the new IT provider marketplace. Most importantly, Heller defines the top ten skills and behaviors that CIOs will need to develop if they are going to be successful in an ever changing landscape. As a master storyteller, Heller incorporates philosophy, humor, and pragmatic advice into a book that both informs and entertains.

Strategic risk control is one of the goals in creating intelligent organizations and at the same time it is part of the appetite for creating smarter organizations to support organizations' development. Knowledge that is created by data analytics and the capacity to operationalize that knowledge through digital transformation can produce potential sustainable competitive advantages. The core of the volume is connecting data analytics and artificial intelligence, risk management and digitalization to create strategic intelligence as the capacity of adaptation that organizations need to compete and to succeed. Strategic risk is represented by the probability of having variations in the performance results of the organizations that can limit their capacity to maintain sustainable competitive advantages. There is an emphasis in the book about the conversion of models that support data analytics into actions to mitigate strategic risk based on digital transformation. This book reviews the steps that organizations have taken in using technology that connects the data analytics modeling process and digital operations, such as the shift from the use of statistical learning and machine learning for data analytics to the improvement and use of new technologies. The digitalization process is a potential opportunity for organizations however the results are not necessarily good for everyone. Hence, organizations implement strategic risk control in cloud computing, blockchain, artificial intelligence and create digital networks that are connected internally and externally to deal with internal and external customers, with suppliers and buyers, and with competitors and substitutes.
