ccsp pdf: Cyber Persistence Theory Michael P. Fischerkeller, Emily O. Goldman, Richard J. Harknett, 2022-05-06 A bold re-conceptualization of the fundamentals driving behavior and dynamics in cyberspace. Most cyber operations and campaigns fall short of activities that states would regard as armed conflict. In *Cyber Persistence Theory*, Michael P. Fischerkeller, Emily O. Goldman, and Richard J. Harknett argue that a failure to understand this strategic competitive space has led many states to misapply the logic and strategies of coercion and conflict to this environment and, thus, suffer strategic loss as a result. The authors show how the paradigm of deterrence theory can neither explain nor manage the preponderance of state cyber activity. They present a new theory that illuminates the exploitive, rather than coercive, dynamics of cyber competition and an analytical framework that can serve as the basis for new strategies of persistence. Drawing on their policy experience, they offer a new set of prescriptions to guide policymakers toward a more stable, secure cyberspace.

ccsp pdf: The Effective CISSP: Security and Risk Management Wentz Wu, 2020-04-27 Start with a Solid Foundation to Secure Your CISSP! The Effective CISSP: Security and Risk Management is for CISSP aspirants and those who are interested in information security or confused by cybersecurity buzzwords and jargon. It is a supplement, not a replacement, to the CISSP study guides that CISSP aspirants have used as their primary source. It introduces core concepts, not all topics, of Domain One in the CISSP CBK - Security and Risk Management. It helps CISSP aspirants build a conceptual security model or blueprint so that they can proceed to read other materials, learn confidently and with less frustration, and pass the CISSP exam accordingly. Moreover, this book is also beneficial for ISSMP, CISM, and other cybersecurity certifications. This book proposes an integral conceptual security model by integrating ISO 31000, NIST FARM Risk Framework, and

PMI Organizational Project Management (OPM) Framework to provide a holistic view for CISSP aspirants. It introduces two overarching models as the guidance for the first CISSP Domain: Wentz's Risk and Governance Model. Wentz's Risk Model is based on the concept of neutral risk and integrates the Peacock Model, the Onion Model, and the Protection Ring Model derived from the NIST Generic Risk Model. Wentz's Governance Model is derived from the integral discipline of governance, risk management, and compliance. There are six chapters in this book organized structurally and sequenced logically. If you are new to CISSP, read them in sequence; if you are eager to learn anything and have a bird view from one thousand feet high, the author highly suggests keeping an eye on Chapter 2 Security and Risk Management. This book, as both a tutorial and reference, deserves space on your bookshelf.

ccsp pdf: Understanding Climate Change Feedbacks National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Climate Research Committee, Panel on Climate Change Feedbacks, 2003-12-02 During the past decade, scientists have learned much about the complex natural processes that influence climate variability and change, and our ability to model climate has increased significantly. We also have begun to better identify those parts of the climate system that are particularly important and not well understood and that therefore limit our ability to project the future evolution of Earth's climate. One of these critical areas is our understanding of the role of feedbacks in the climate system and their role in determining climate sensitivity. Feedbacks are processes in the climate system that can either amplify or dampen the system's response to changed forcings. This study looks at what is known and not known about climate change feedbacks and seeks to identify the feedback processes most in need of improved understanding. It identifies key observations needed to monitor and understand climate feedbacks, discusses ways to evaluate progress in understanding climate feedbacks, recommends ways to improve climate modeling and analysis for climate feedbacks research, and identifies priority areas for research.

ccsp pdf: The US National Climate Assessment Katharine Jacobs, Susanne Moser, James Buizer, 2016-08-09 This book offers valuable climate policy and climate assessment lessons, depicting what it takes to build a sustained climate assessment process. It explores the third U.S. National Climate Assessment (NCA3) report as compared with previous US national climate assessments, from both a process and content perspective. The U.S. Global Change Research Program is required by law to produce a National Climate Assessment report every four years, and these reports provide a comprehensive evaluation of climate science as well as observed and projected climate impacts on a variety of sectors. As the book describes, a key contribution of the NCA3 approach is a far more deliberate interdisciplinary process, as well as an engagement strategy that brought hundreds of public and private sector stakeholders into the assessment community. Among its most important conceptual contributions was an explicit focus on building the infrastructure to conduct better assessments over time and an experimental approach to analysis of the impacts of climate on cross-sectoral systems and inter-locking and cascading effects across sectors. Readers may explore innovations such as the development of regional climatologies and projections for every region of the US, as well as the development of the Global Change Information System. The book also highlights the need for decision-makers to be part of the assessment process, in order for assessment findings to be truly useful from a decision-maker's perspective. Many lessons have been learned by the NCA3 authors that can be useful in future assessments and adaptation processes, both within the US and internationally. This book passes on such lessons and includes an evaluation of the role of state climate assessments in ongoing national assessment processes.
