Security Committee Standard Interagency Security Committee, 2017-07-28 One of the Department of Homeland Security's (DHS) priorities is the protection of Federal employees and private citizens who work within and visit U.S. Government-owned or leased facilities. The Interagency Security Committee (ISC), chaired by DHS, consists of 53 Federal departments and agencies, has as its mission the development of security standards and best practices for nonmilitary Federal facilities in the United States. As Chair of the ISC, I am pleased to introduce the new ISC document titled The Risk Management Process: An Interagency Security Committee Standard (Standard). This ISC Standard defines the criteria and processes that those responsible for the security of a facility should use to determine its facility security level and provides an integrated, single source of physical security countermeasures for all nonmilitary Federal facilities. The Standard also provides guidance for customization of the countermeasures for Federal facilities.

cisa review manual pdf: National Emergency Communications Plan U. s. Department of Homeland Security, 2012-12-11 Every day in cities and towns across the Nation, emergency response personnel respond to incidents of varying scope and magnitude. Their ability to communicate in real time is critical to establishing command and control at the scene of an emergency, to maintaining event situational awareness, and to operating overall within a broad range of incidents. However, as numerous after-action reports and national assessments have revealed, there are still communications deficiencies that affect the ability of responders to manage routine incidents and support responses to natural disasters, acts of terrorism, and other incidents. Recognizing the need for an overarching emergency communications strategy to address these shortfalls, Congress directed the Department of Homeland Security's (DHS) Office of Emergency

Communications (OEC) to develop the first National Emergency Communications Plan (NECP). Title XVIII of the Homeland Security Act of 2002 (6 United States Code 101 et seq.), as amended, calls for the NECP to be developed in coordination with stakeholders from all levels of government and from the private sector. In response, DHS worked with stakeholders from Federal, State, local, and tribal agencies to develop the NECP—a strategic plan that establishes a national vision for the future state of emergency communications. To realize this national vision and meet these goals, the NECP established the following seven objectives for improving emergency communications for the Nation's Federal, State, local, and tribal emergency responders: 1. Formal decision-making structures and clearly defined leadership roles coordinate emergency communications capabilities. 2. Federal emergency communications programs and initiatives are collaborative across agencies and aligned to achieve national goals. 3. Emergency responders employ common planning and operational protocols to effectively use their resources and personnel. 4. Emerging technologies are integrated with current emergency communications capabilities through standards implementation, research and development, and testing and evaluation. 5. Emergency responders have shared approaches to training and exercises, improved technical expertise, and enhanced response capabilities. 6. All levels of government drive long-term advancements in emergency communications through integrated strategic planning procedures, appropriate resource allocations, and public-private partnerships. 7. The Nation has integrated preparedness, mitigation, response, and recovery capabilities to communicate during significant events. The NECP also provides recommended initiatives and milestones to guide emergency response providers and relevant government officials in making measurable improvements in emergency communications capabilities. The NECP recommendations help to guide, but do not dictate, the distribution of homeland security funds to improve emergency communications at the Federal, State, and local levels, and to support the NECP implementation. Communications investments are among the most significant, substantial, and long-lasting capital investments that agencies make; in addition, technological innovations for emergency communications are constantly evolving at a rapid pace. With these realities in mind, DHS recognizes that the emergency response community will realize this national vision in stages, as agencies invest in new communications systems and as new technologies emerge.
