eclinicalworks training manual: Better EHR Jiajie Zhang (Professor of biomedical informatics), Muhammad Walji, 2014-10-01 Electronic Health Records (EHR) offer great potential to

increase healthcare efficiency, improve patient safety, and reduce health costs. The adoption of EHRs among office-based physicians in the US has increased from 20% ten years ago to over 80% in 2014. Among acute care hospitals in US, the adoption rate today is approaching 100%. Finding relevant patient information in electronic health records' (EHRs) large datasets is difficult, especially when organized only by data type and time. Automated clinical summarization creates condition-specific displays, promising improved clinician efficiency. However, automated summarization requires new kinds of clinical knowledge (e.g., problem-medication relationships).

eclinicalworks training manual: *Remote Medicine: A Textbook For Trainee And Established Remote Healthcare Practitioners* John Nelson Norman, Malcolm Valentine, 2020-07-13 This is the first major textbook on the emerging speciality of remote medicine. The modern concept emerged in the 1970s when the medical directors of the main oil companies operating in the North Sea — BP, Shell and Mobil — sought advice from the University sector since the morbidity and mortality levels of offshore workers had become unacceptable. A system of healthcare was jointly developed and applied by the industrial doctors and the academic doctors of Aberdeen University which worked well and greatly improved the healthcare of the offshore personnel. It was subsequently validated by duplication for the very different scientific population of the British Antarctic Survey where it worked even better. It was next introduced to the oilfields of the Middle East — Qatar (QGPC, Offshore and Onshore), Abu Dhabi (ADMA and ADCO) and Oman (PDO) where it worked equally well. The Aberdeen Universities next collaborated with the UAE University in Abu Dhabi to evaluate and develop telemedicine mainly in the area of education and research and they established early transcontinental courses and conferences together with joint supervision and production of higher degrees between collaborating universities in different parts of the world. The recently established International Remote Healthcare Association (IRHCA), backed by the University of Glasgow, the UAE University in Abu Dhabi and the Siberian State Medical University has established an ongoing study to determine the education and skills required to produce a competent Remote Healthcare Practitioner. The chapters in this book contain the knowledge base currently thought by the IRHCA to be necessary to produce a competent remote healthcare practitioners and thus to allow curricular development of the new courses necessary for the establishment of University qualifications and for the regulating authorities to design examinations and establish appropriate registration. Since this is a new speciality the continuing research of the IRHCA is necessary to act as an audit to ensure that the information in the book, and the courses derived from it remain relevant and also to detect omissions as they are recognised.

eclinicalworks training manual: Procuring Interoperability National Academy of Medicine, The Learning Health System Series, 2023-09-03 Realizing the promise of digital technology will depend on the ability to share information across time and space from multiple devices, sources, systems, and organizations. The major barrier to progress is not technical; rather, it is in the failure of organizational demand and purchasing requirements. In contrast to many other industries, the purchasers of health care technologies have not marshaled their purchasing power to drive interoperability as a key requirement. Better procurement practices, supported by compatible interoperability platforms and architecture, will allow for better, safer patient care; reduced administrative workload for clinicians; protection from cybersecurity attacks; and significant financial savings across multiple markets. With funding support from the Gordon and Betty Moore Foundation, this National Academy of Medicine Special Publication represents a multi-stakeholder exploration of the path toward achieving large-scale interoperability through strategic acquisition of health information technology solutions and devices. In this publication, data exchanges over three environments are identified as critical to achieving interoperability: facility-to-facility (macro-tier); intra-facility (meso-tier); and at point-of-care (micro-tier). The publication further identifies the key characteristics of information exchange involved in health and health care, the nature of the requirements for functional interoperability in care processes, the mapping of those requirements into prevailing contracting practices, the specification of the steps necessary to achieve system-wide interoperability, and the proposal of a roadmap for using procurement specifications to engage those steps. The publication concludes with a series of checklists to be used by health care organizations and other stakeholders to accelerate progress in achieving system-wide interoperability.

eclinicalworks training manual: Seeking Value Wesley E. Sowers, M.D., Jules M. Ranz, M.D., Group for the Advancement of Psychiatry, 2020-11-10 The U.S. health care system is the most expensive in the world by a considerable margin, yet health indicators are among the worst in the developed world. Seeking Value: Balancing Cost and Quality in Psychiatric Care, a comprehensive volume by the Group for the Advancement of Psychiatry's Mental Health Services Committee, examines the factors that have contributed to this disparity and offers a holistic vision for health care reform--one in which the psychiatric profession plays a pivotal role. From cost consciousness in the prescribing of medications and forming alliances with other health professionals to rethinking the way health care is financed and efforts to eliminate counterproductive incarceration practices, this guide outlines individual, systemic, and sociopolitical interventions that will position readers to effect substantive change both in the short term and in the long term. Beyond spurring thought and conversation around how to improve value in the services the psychiatric profession provides and the systems in which it operates, this book will equip those looking to develop a concrete advocacy agenda and the strategies needed to see it realized.

eclinicalworks training manual: Advancing Oral Health in America Institute of Medicine, Board on Health Care Services, Committee on an Oral Health Initiative, 2012-01-05 Though it is highly preventable, tooth decay is a common chronic disease both in the United States and worldwide. Evidence shows that decay and other oral diseases may be associated with adverse pregnancy outcomes, respiratory disease, cardiovascular disease, and diabetes. However, individuals and many health care professionals remain unaware of the risk factors and preventive approaches for many oral diseases. They do not fully appreciate how oral health affects overall health and well-being. In *Advancing Oral Health in America*, the Institute of Medicine (IOM) highlights the vital role that the Department of Health and Human Services (HHS) can play in improving oral health and oral health care in the United States. The IOM recommends that HHS design an oral health initiative which has clearly articulated goals, is coordinated effectively, adequately funded and has high-level accountability. In addition, the IOM stresses three key areas needed for successfully maintaining oral health as a priority issue: strong leadership, sustained interest, and the involvement of multiple stakeholders from both the public and private sectors. *Advancing Oral Health in America* provides practical recommendations that the Department of

Health and Human Services can use to improve oral health care in America. The report will serve as a vital resource for federal health agencies, health care professionals, policy makers, researchers, and public and private health organizations.
